Welcome address

## **Rodney Berkeley CBE**

**Director Infrastructure and Technology**  
Department for Business and Trade

Achievements from the last two years

**Alexandra Luck**

**Programme Director**

National Digital Twin Programme

## What happened since our last Industry Day?

We continue to use the NDTP principles and development attributes

### The Programme will:

- 1 Deliver value demonstrated through measurable, tangible benefit
- 2 Develop and promote open, reusable assets, released incrementally
- 3 Promote a culture of honesty and transparency
- 4 Prioritise accessibility and inclusivity
- 5 Bridge the digital skills and cultural gap
- 6 Establish the rules of the road
- 7 Establish strategic ownership and governance

## What happened since our last Industry Day?

We continue to use the NDTP principles and development attributes

### Digital twins, individually and when connected, must be

- 1 Safe
- 2 Secure
- 3 Trustworthy [ Transparency | Accessibility | Control ]
- 4 Ethical [ Individual rights | Privacy | Non-discrimination | Non-manipulation ]
- 5 Sustainable [ Economically | Socially | Environmentally ]
- 6 Adaptable [ Robust | Resilient | Extendable | Extant ]
- 7 Interoperable

# What happened since our last Industry Day?

We continue to focus on the four focus areas

## Operating frameworks

Legal Sustainability Ethics

Technical Safety Security

Commercial Governance

Delivery principles

Development attributes

X-Government alignment

## Data and technology

Integration architecture

Ontology Data visualisation

Data sources, quality,  
interoperability

Model interoperability

Open-source repository

## Skills, culture and engagement

Skills gap – current & next gen

Communication and outreach

Stakeholder engagement

## Demonstrator programme

Retrofitting in housing

Energy system

Asset resilience, emergency  
planning and response

Vulnerable people

## What happened since our last Industry Day?

We continue to focus on the four focus areas and have made **significant progress on...**

### Operating frameworks

Legal Sustainability Ethics

Technical Safety Security

Commercial Governance

Delivery principles

Development attributes

X-Government alignment

### Data and technology

Integration architecture

Ontology Data visualisation

Data sources, quality,  
interoperability

Model interoperability

Open-source repository

### Skills, culture and engagement

Skills gap – current & next gen

Communication and outreach

Stakeholder engagement

### Demonstrator programme

Retrofitting in housing

Energy system

Asset resilience, emergency  
planning and response

Vulnerable people

## What happened since our last Industry Day?

We continue to deliver with a very small team

[Complete contact form](#)

**Telephone:**  
[0345 410 2222](#)

### Useful information

[Glossary](#)

# What happened since our last Industry Day?

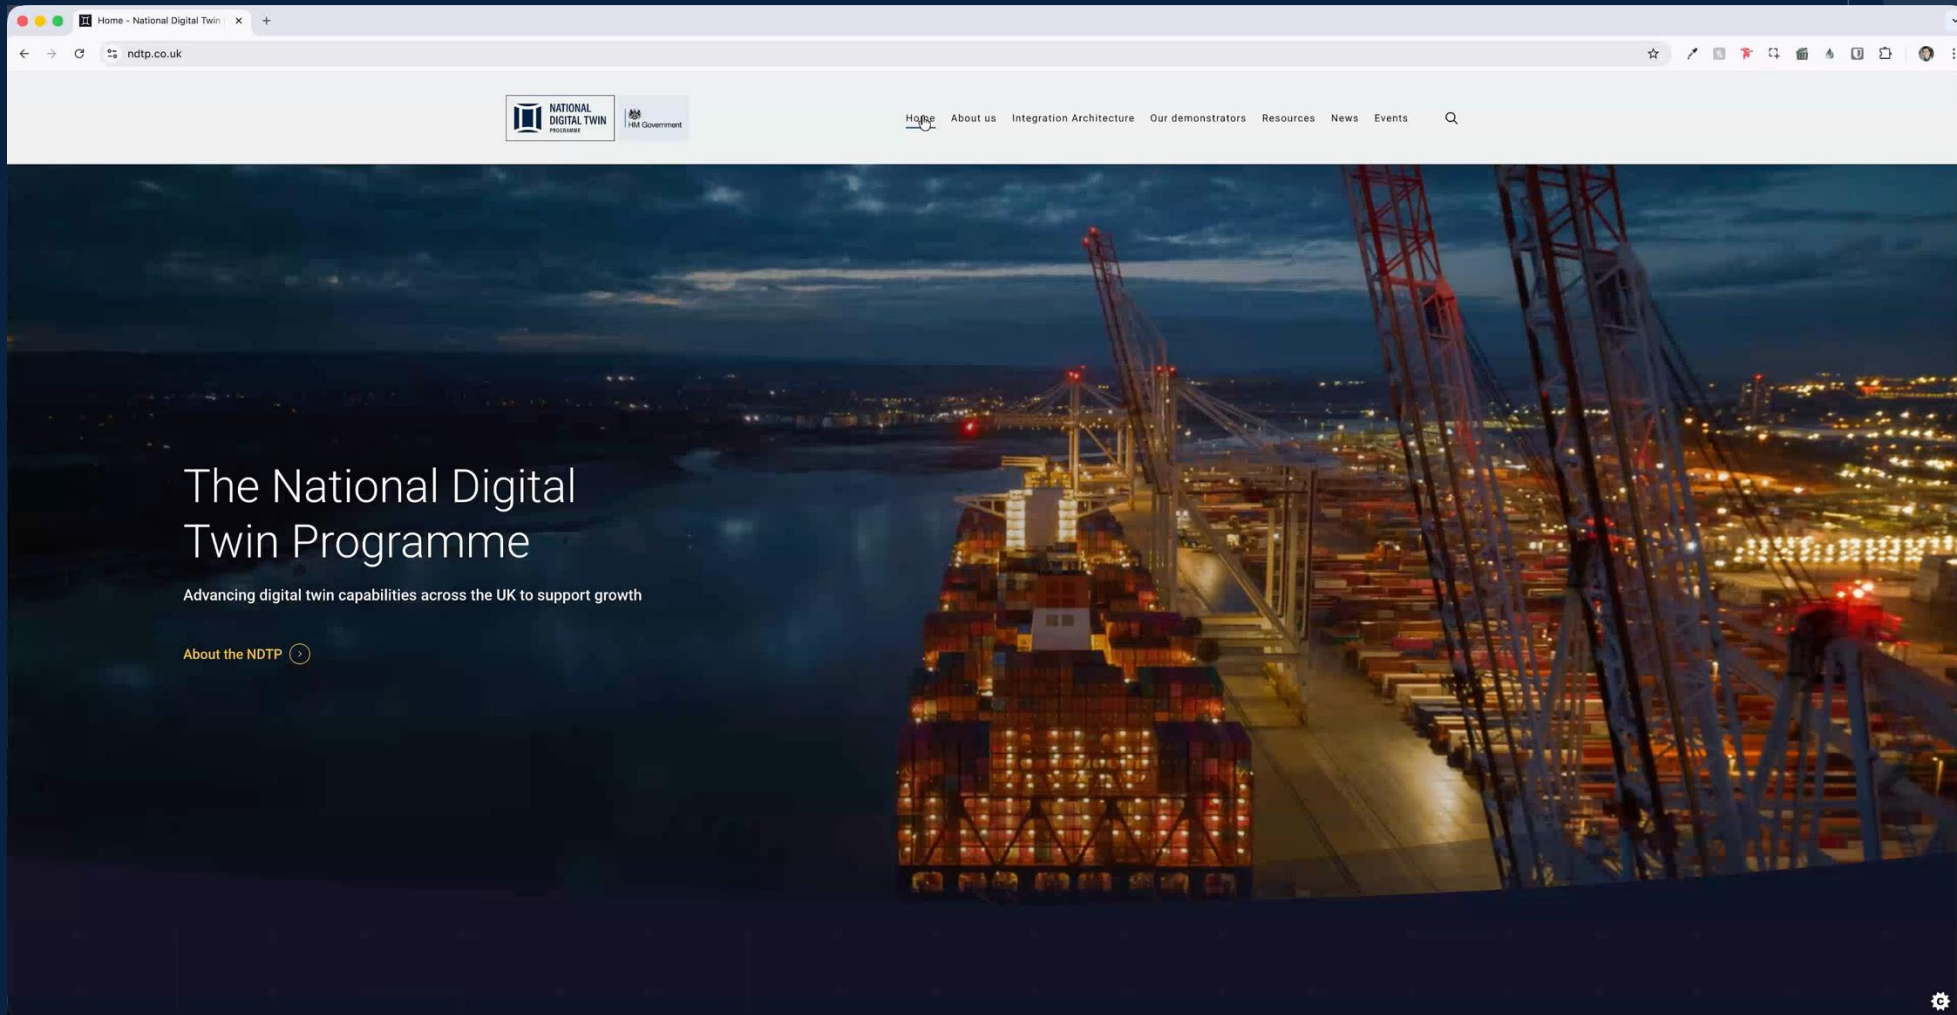

The National Digital Twin Resilience Challenge 2025

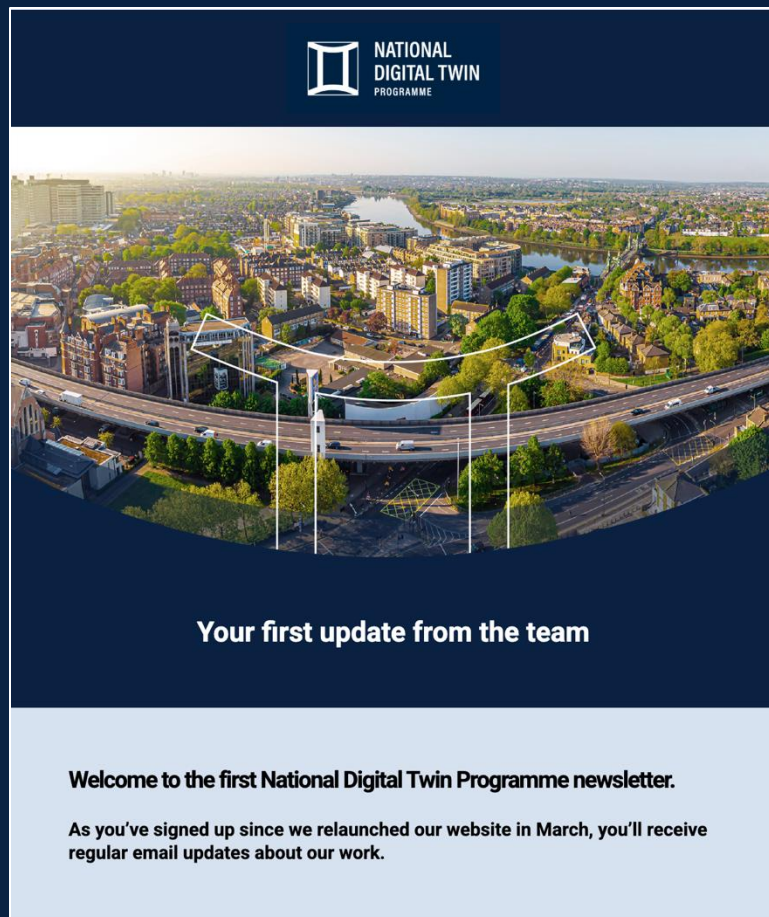

# What happened since our last Industry Day?

We have a (recently updated) companion website

## What happened since our last Industry Day?

We have (recently updated) launched a newsletter sent every 2 months

Achievements from the last two years

**Alex Atudosie**

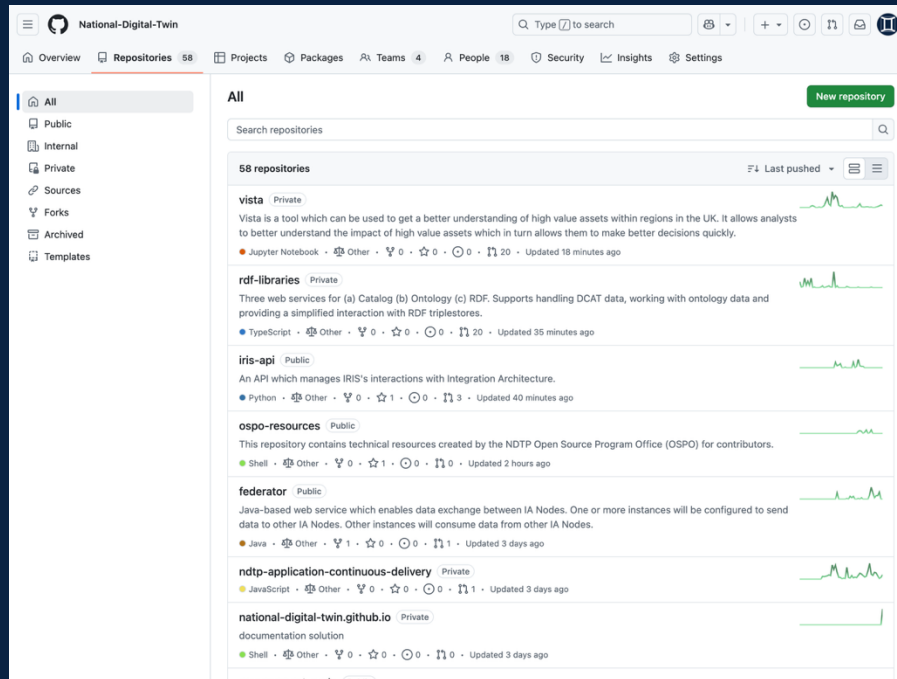

**Programme Manager**

National Digital Twin Programme

# What happened since our last Industry Day?

Established strong open-source foundations

## Stood up a GitHub Organisation

<https://github.com/orgs/National-Digital-Twin>

## Consolidated development work

- Took control of all NDTP codebases
- Applied neutral consistent branding throughout
- This improved visibility and consistency across all projects

Brought all software development under our own GitHub Org.

## What happened since our last Industry Day?

Established strong open-source foundations

### Standardised practices

- We set clear expectations for code creation, review, and maintenance
  - Version control
  - Branching
  - Documentation
  - Contribution
- Delivery practices became standardised and consistent

Established a common framework for how we work with code.

### Built Open-Source Governance

- We created a suite of Markdown files
  - README
  - **AKNOWLEDGEMENTS**
  - MAINTAINERS
  - SECURITY
  - Etc...
- Informed by best practice and Open UK, to support repeatable and responsible open sourcing

Developed reusable templates and guidance for open publication

# What happened since our last Industry Day?

Established strong open-source foundations

## Initial public release – 31 March 2025

### 0.90.0 – 2025-03-31

#### Initial Public Release (Pre-Stable)

This is the first public release of this repository under NDTP's open-source governance model. Since this release is **pre-1.0.0**, changes may still occur that are **not fully backward-compatible**.

#### Initial Features

- Key functionality for loading data into an IA Node via SPARQL file upload and Kafka message stream topic.
- Key functionality for querying data in an IA Node via SPARQL and GraphQL.
- Key functionality for integrating rdf-abac component.

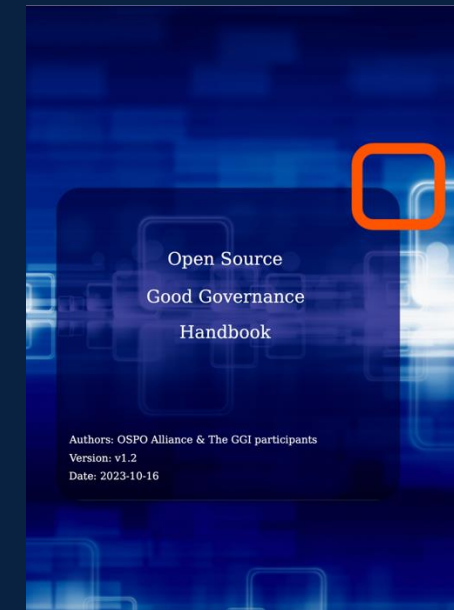

#### Known Limitations

- Some components are subject to change before **1.0.0**.
- APIs may evolve based on partner feedback and internal testing.

Launched our first open-source project.

## Embedded governance for internal development

- We adopted best practice from the Good Governance Handbook from the OSPO Alliance
- Developed a InnerSource licensing model

Developed robust internal development processes.

# What happened since our last Industry Day?

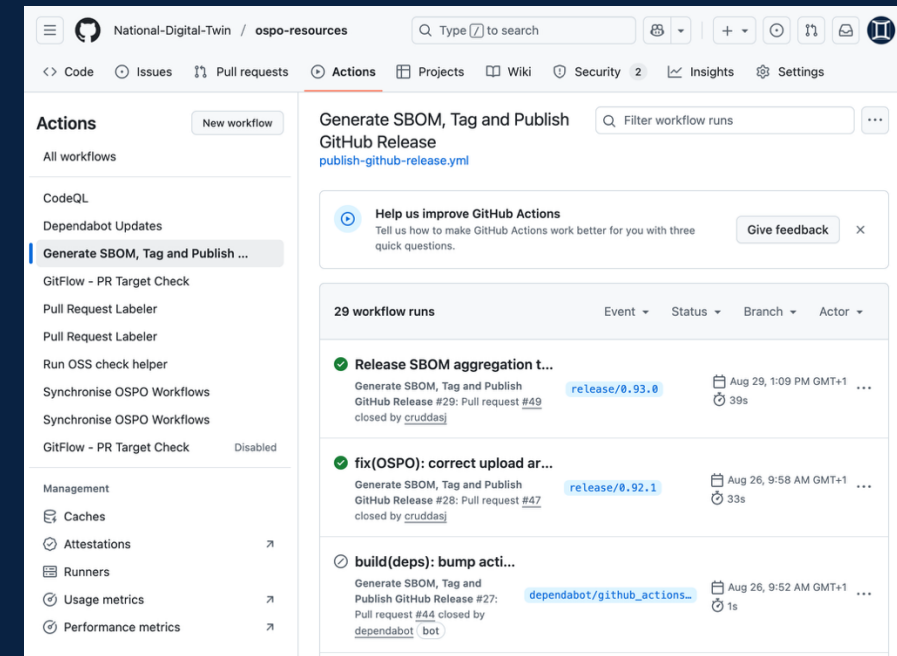

Established strong open-source foundations

## Joined the OSPO Alliance

Strengthened community links.

## Shared OSPO resource publicly

Made our frameworks and tools available for wider use.

# NDT : from one node to a National Node Net

How digital services are structured...a conceptual table using a familiar cloud toolset

	Infrastructure as a Service	Platform as a Service	Software as a Service
	IaaS	PaaS	SaaS
	<i>The foundation everything runs on.</i>	<i>Development environment where things are built.</i>	<i>The final user-facing application most people interact with.</i>
What does the cloud provider deliver?	Basic computing resources – virtual machines, networking, and storage – that you manage and build upon.	Infrastructure AND managed platform for developing, running, and deploying applications. You don't manage servers or runtime.	A fully managed application that user can access directly, with no need to manage servers, storage, or code.
Familiar examples (Microsoft 365)	Azure Virtual Machines Azure Storage Azure Networking	Microsoft Windows Server SQL Server .NET Azure Kubernetes Service	Word Excel Teams

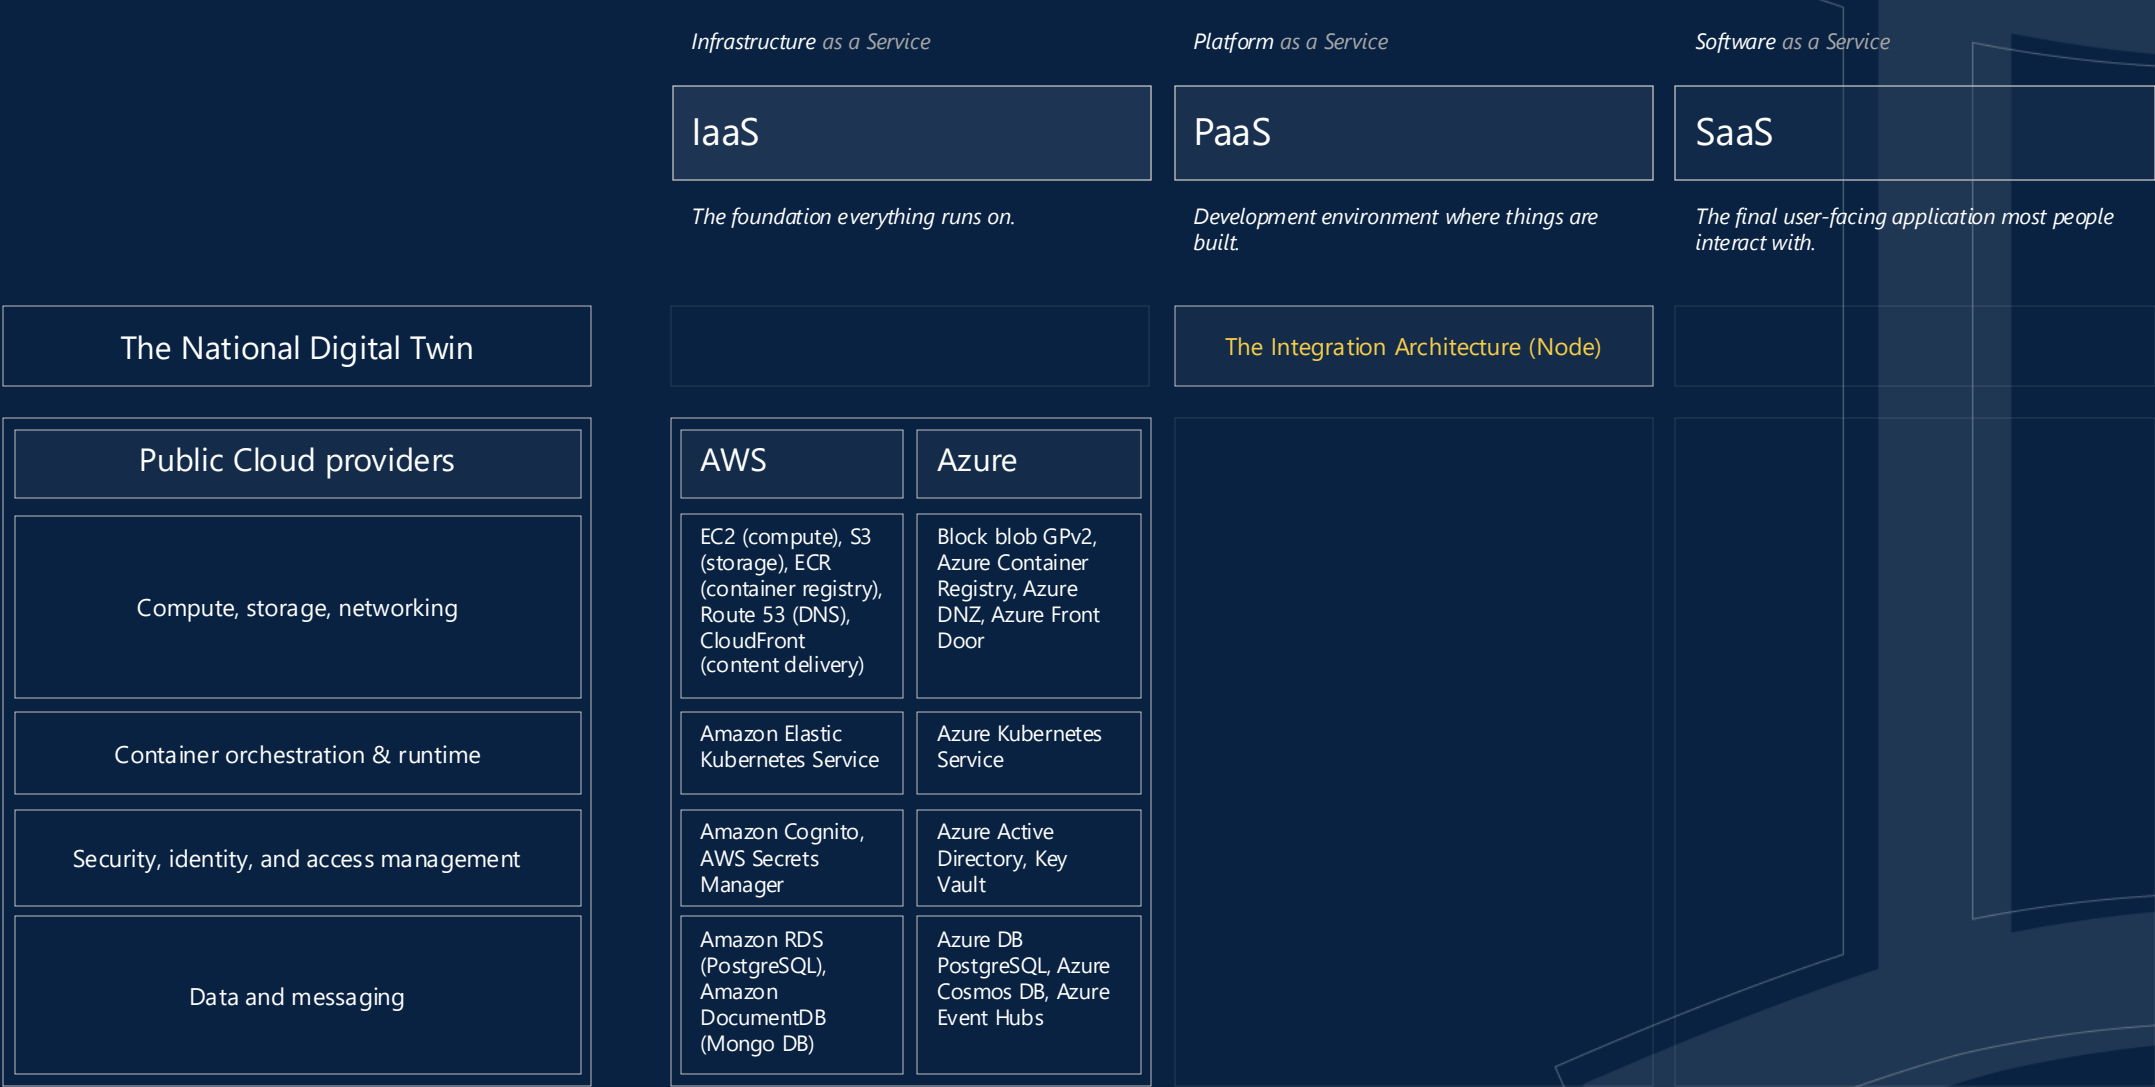

# NDT : from one node to a National Node Net

Where does the Integration Architecture sit?

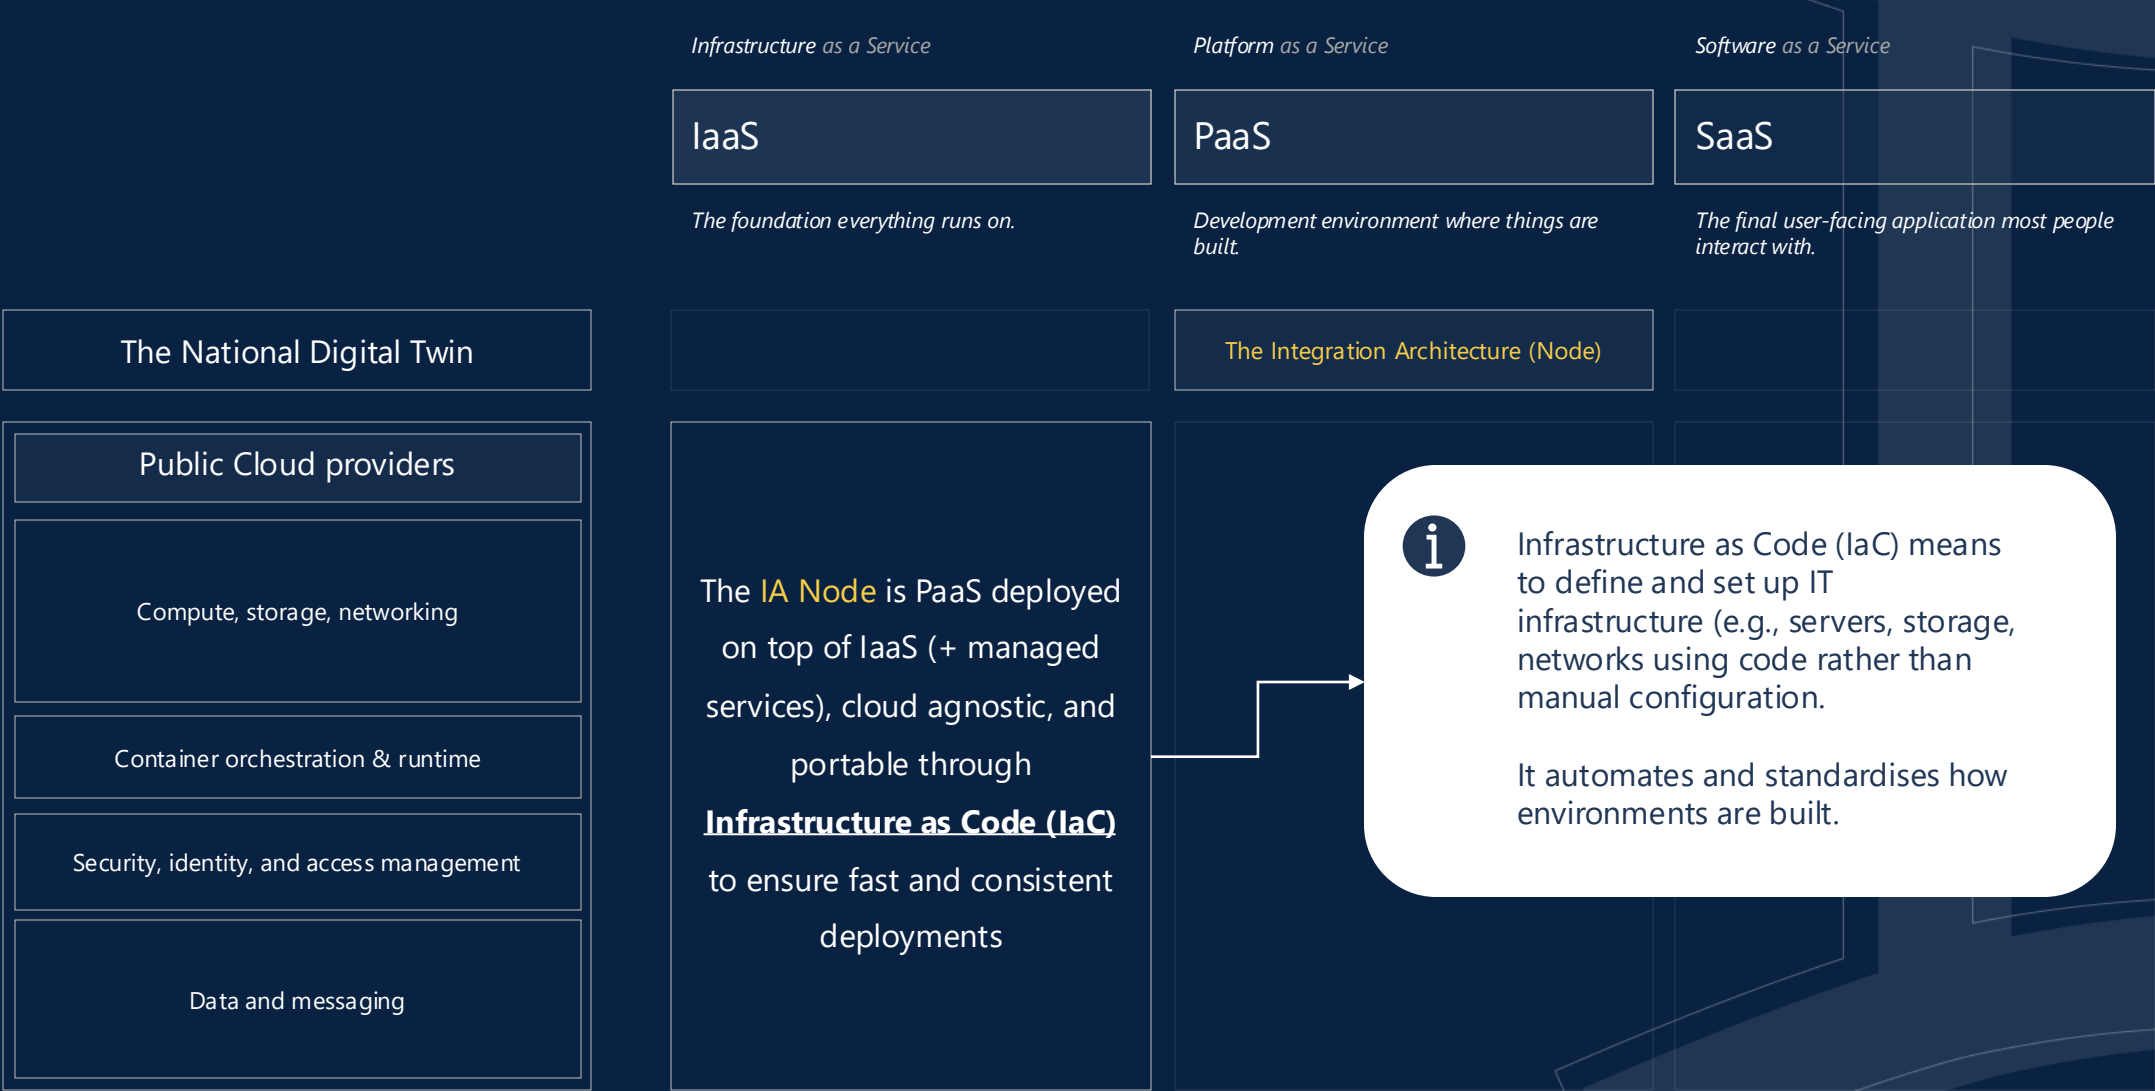

# NDT : from one node to a National Node Net

What would a Node of the Integration Architecture look like in my cloud environment?

# NDT : from one node to a National Node Net

What would a Node of the Integration Architecture look like in my cloud environment?

## NDT : from one node to a National Node Net

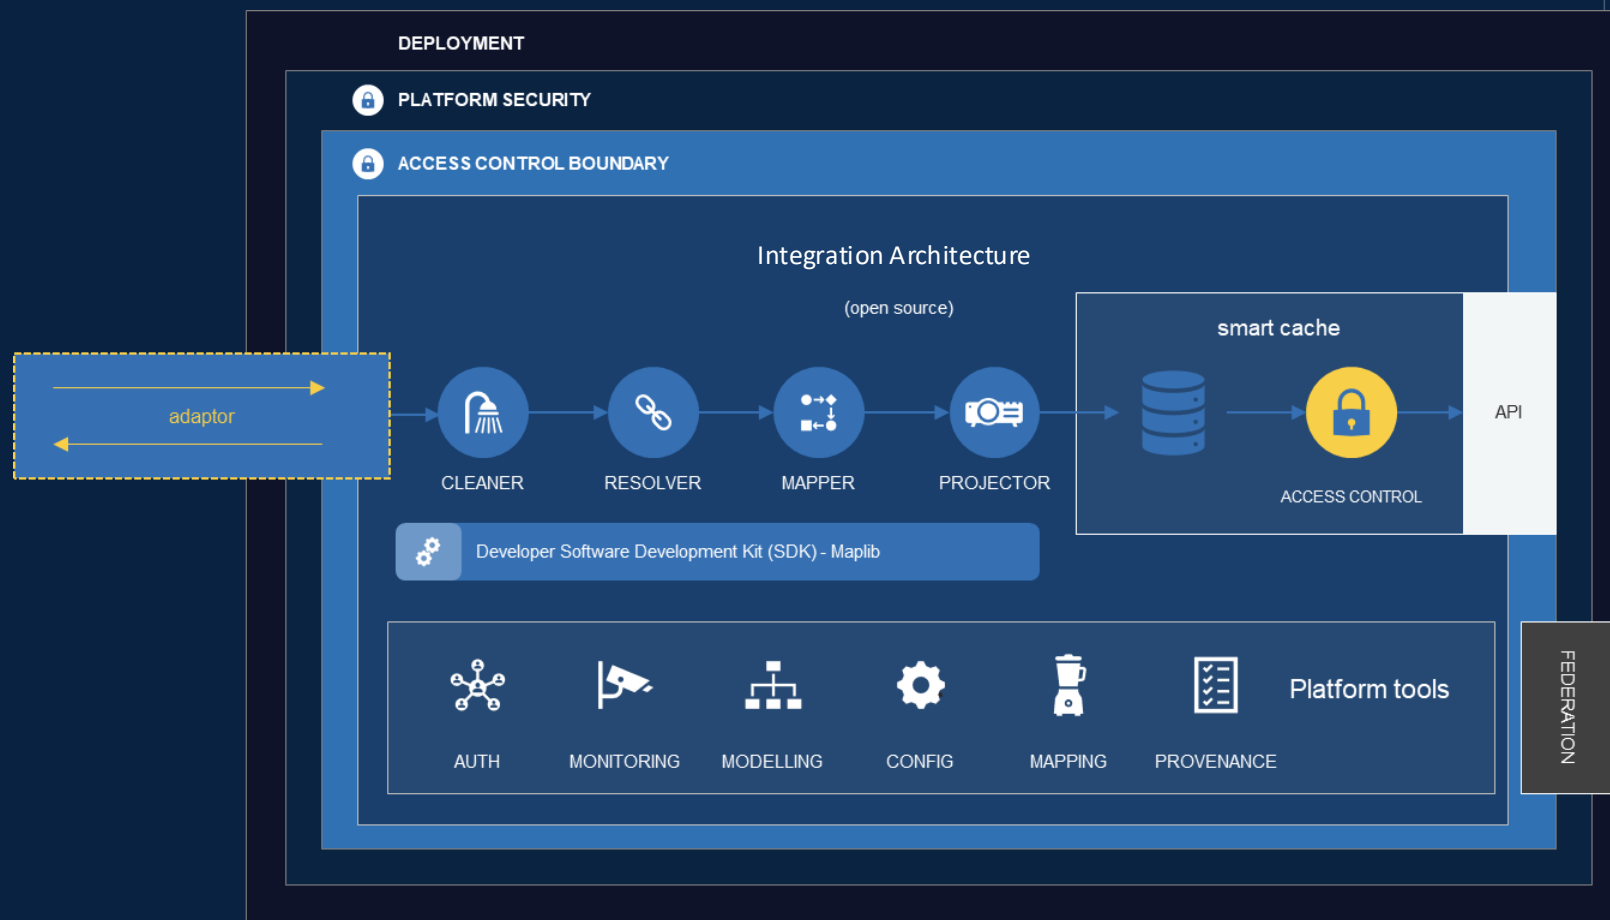

What is an IA Node, and what does it contain?

- Deployable platform software
- Secure, open-source, public solution (avoid vendor lock-in)
- Enables organisation to manage, govern, and share data
- Crown IP, permissively licensed sovereign asset

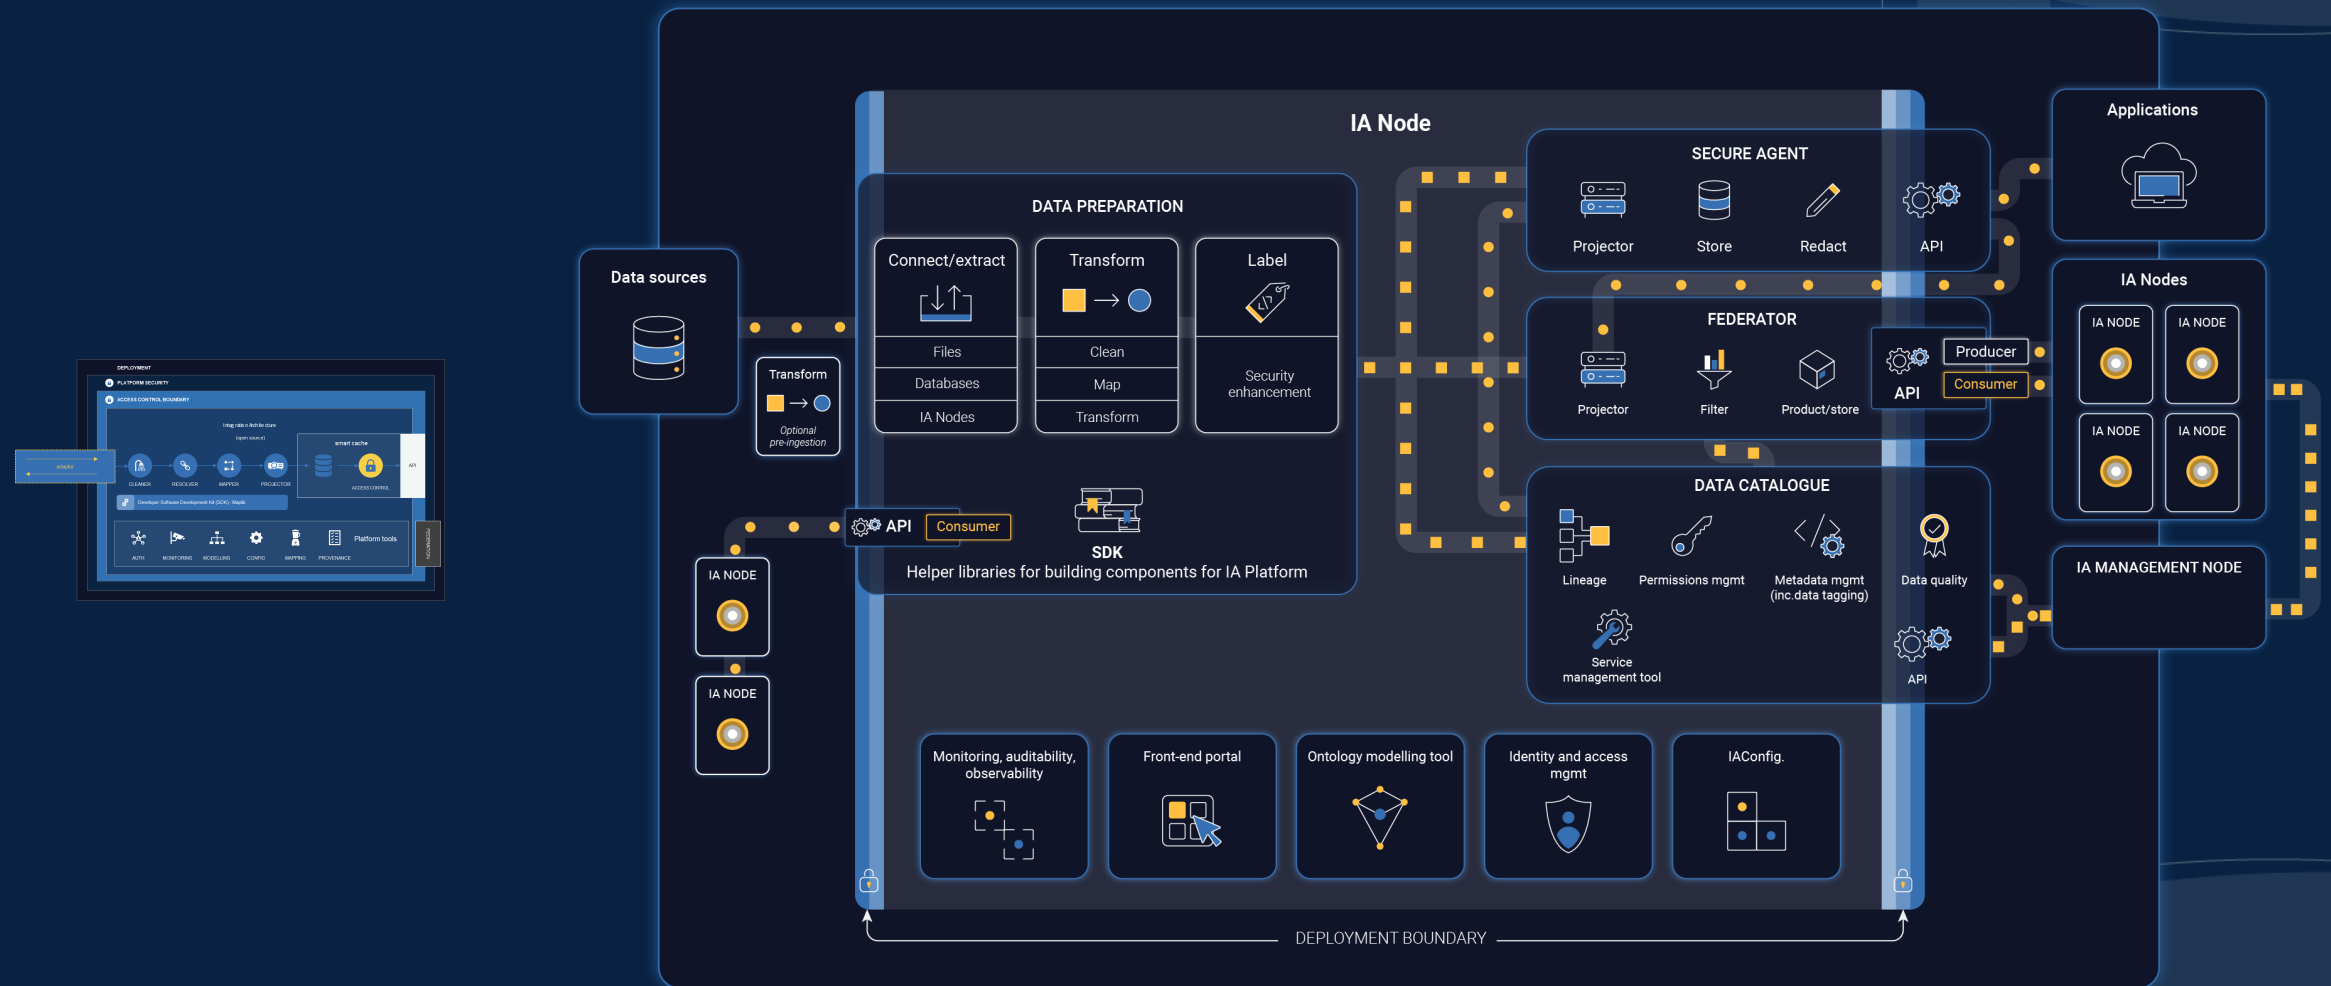

## Significant progress on...

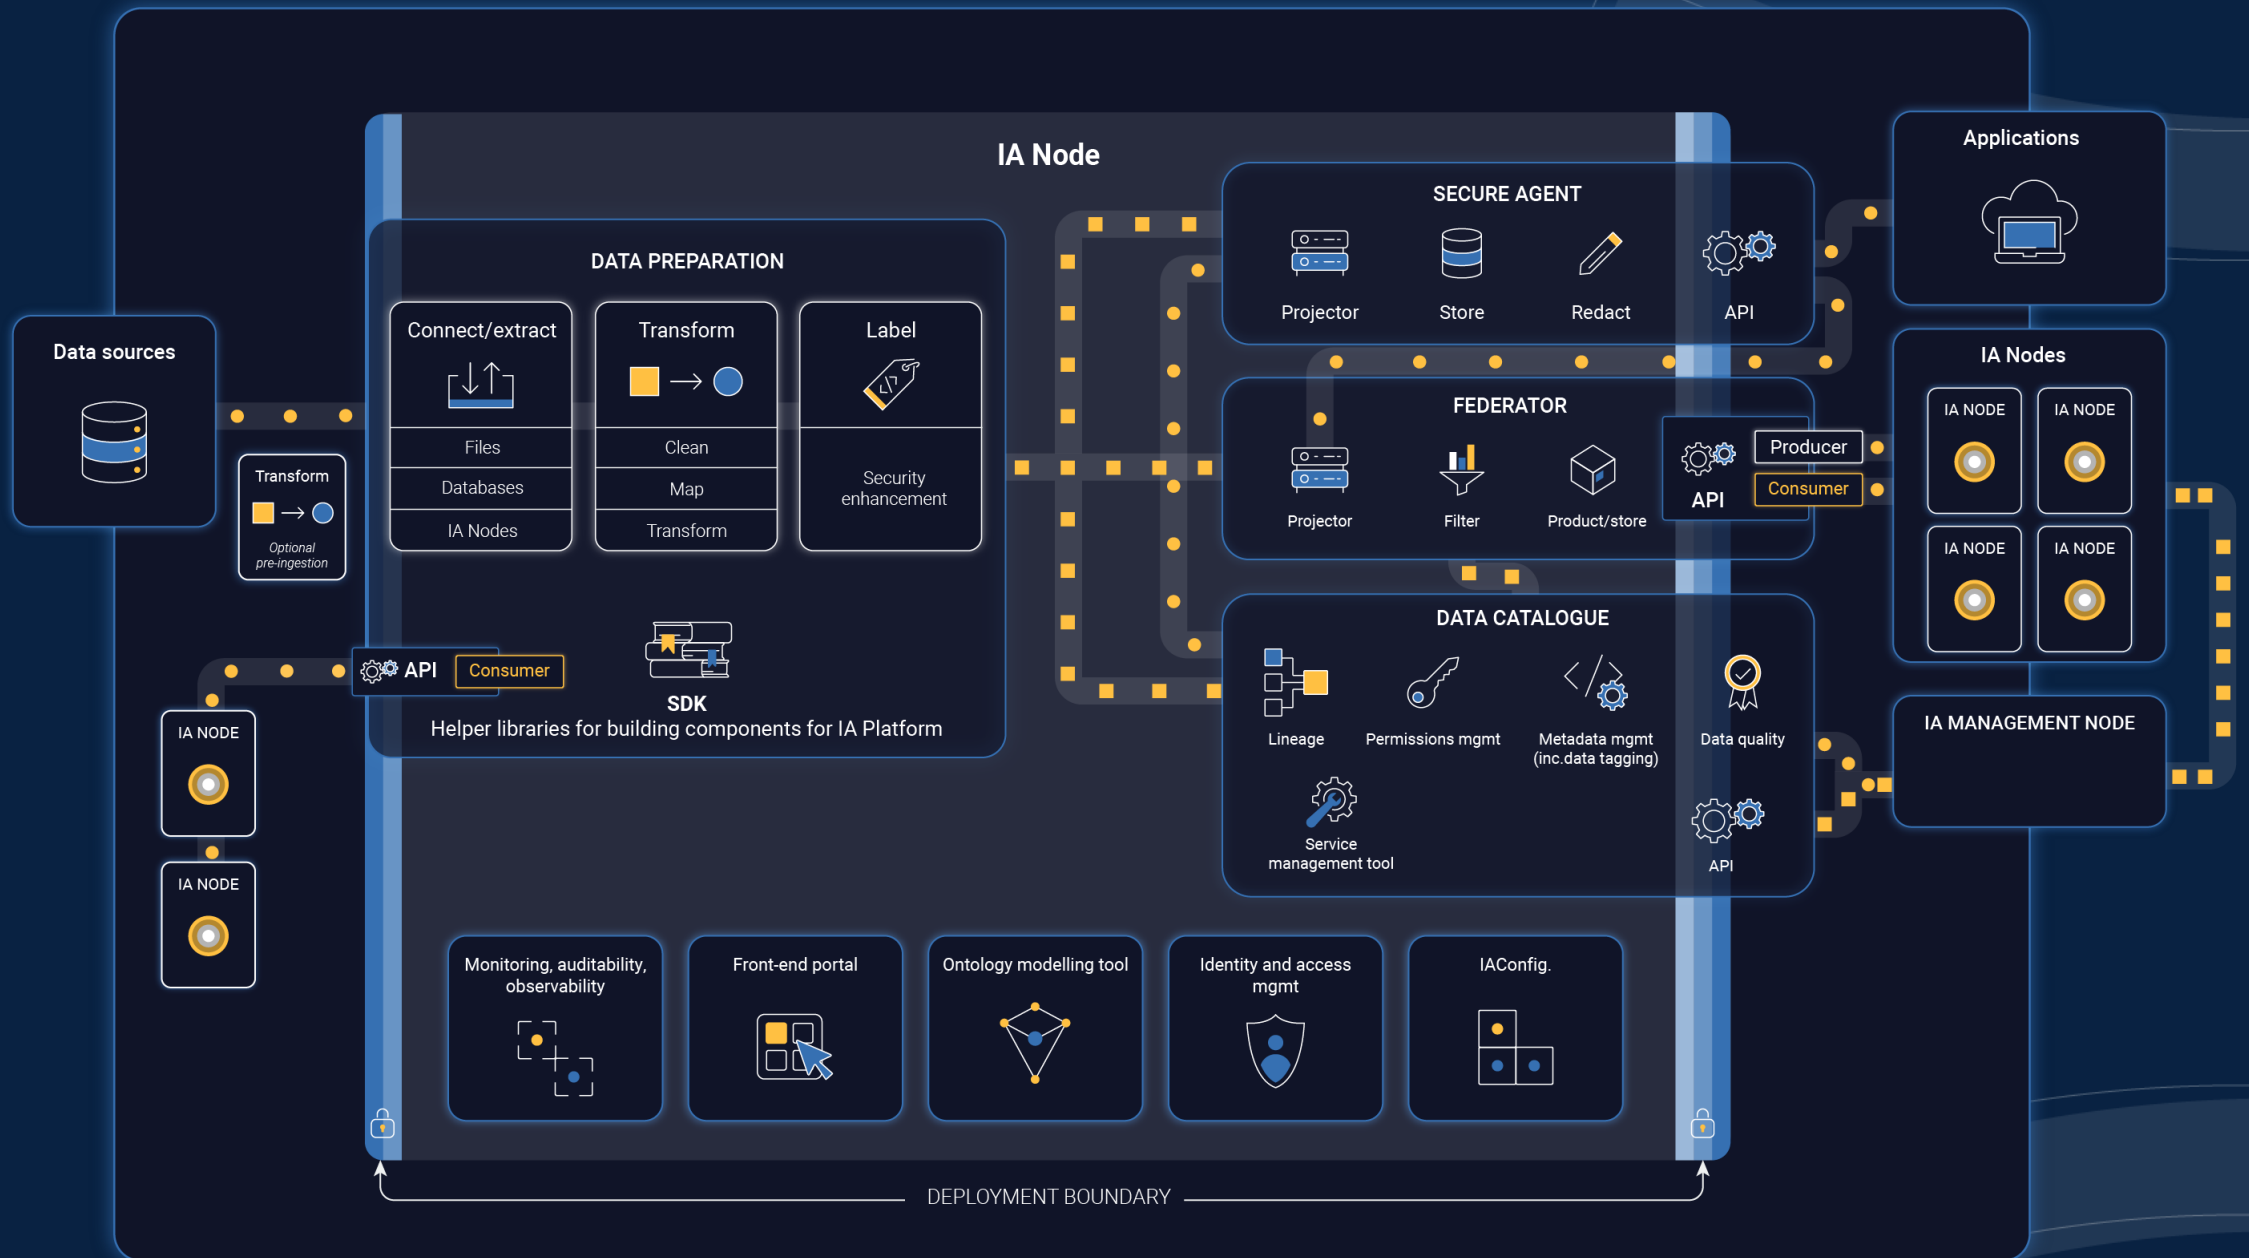

The development of the Integration Architecture

# Significant progress on...

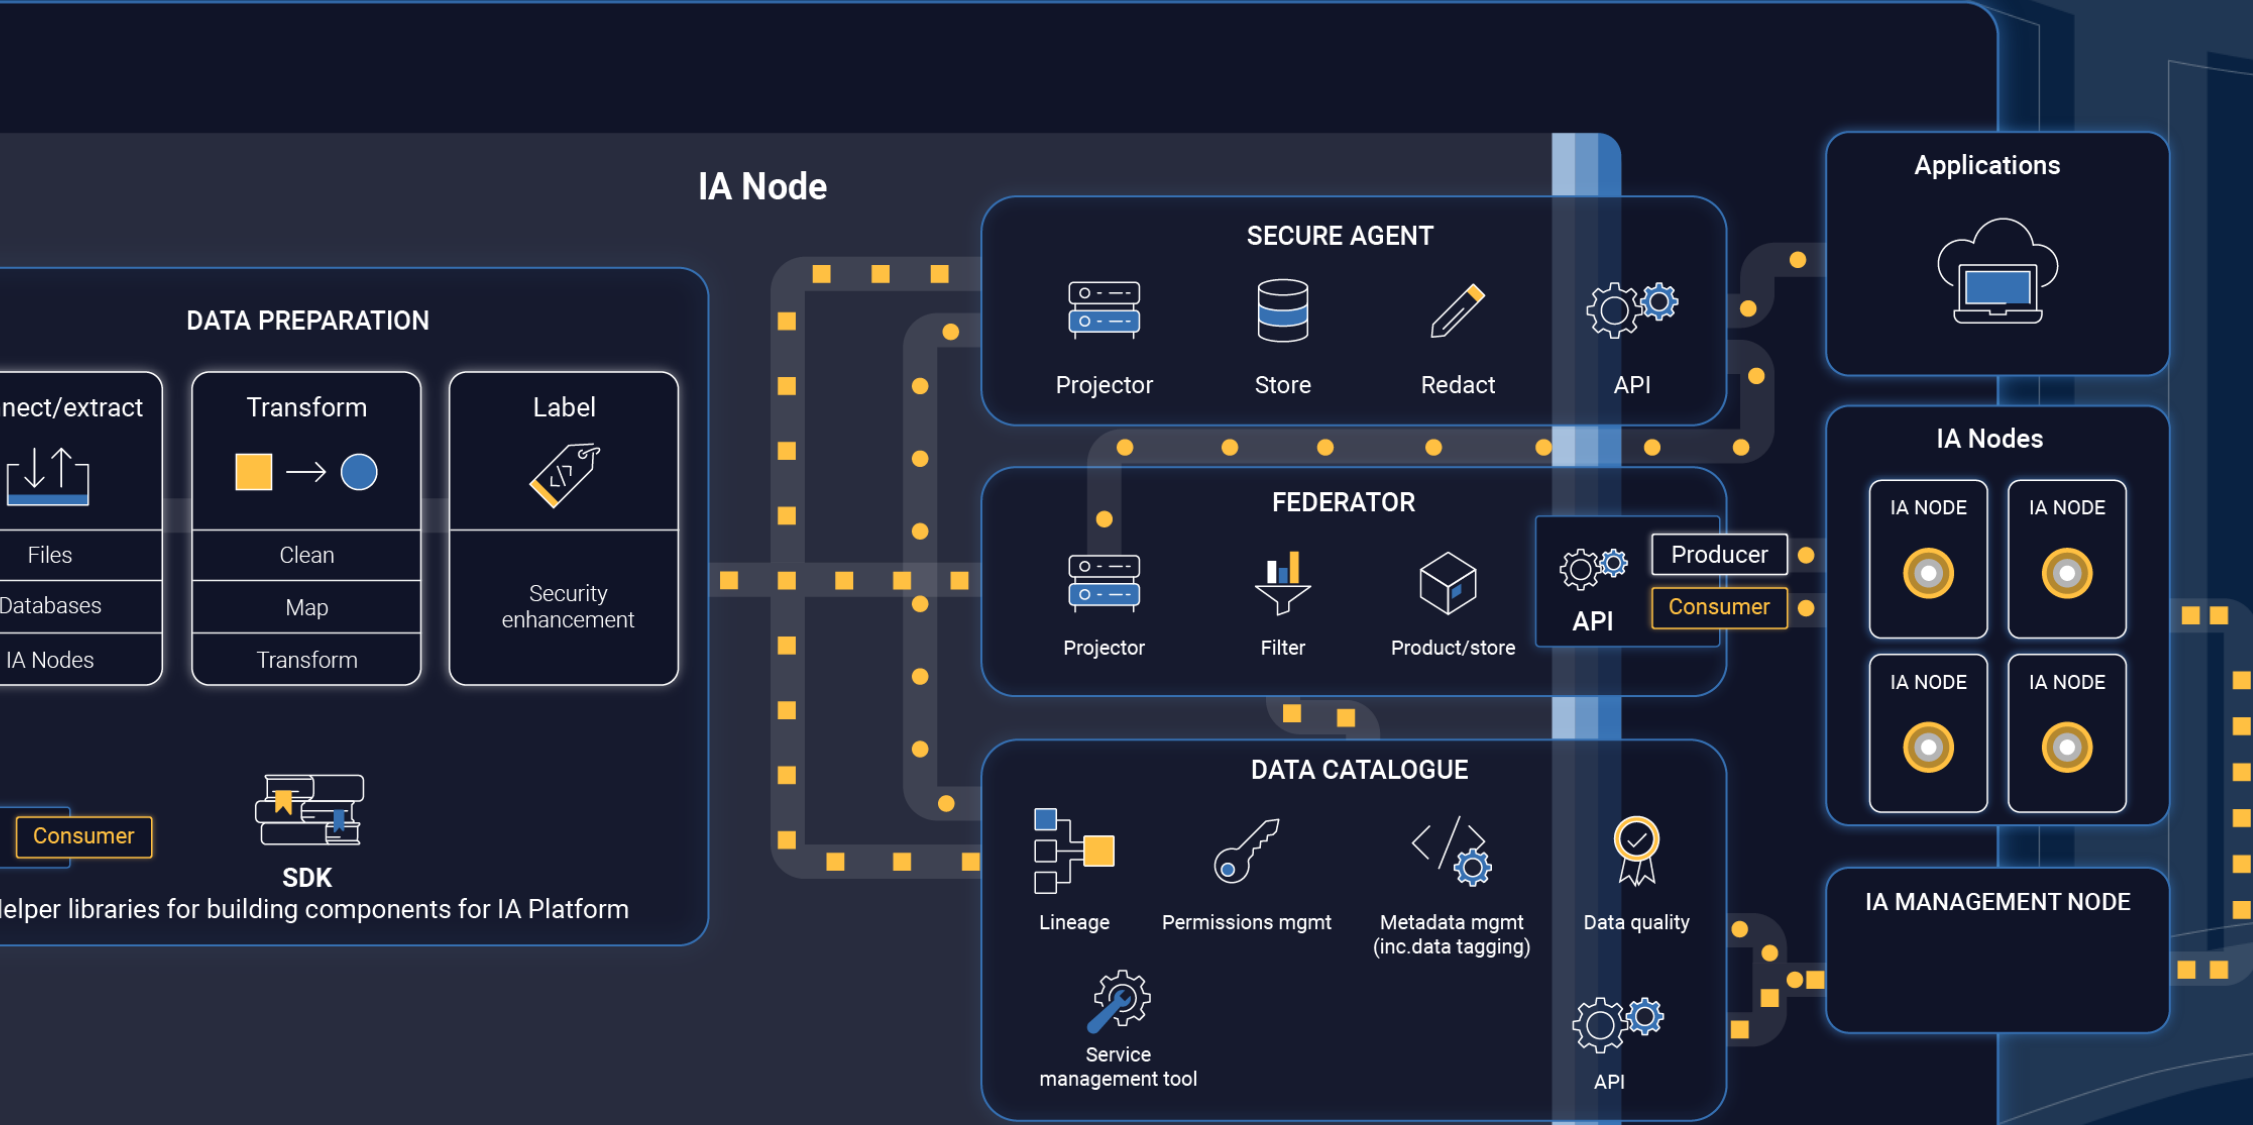

The development of the Integration Architecture

# Significant progress on...

The development of the Integration Architecture

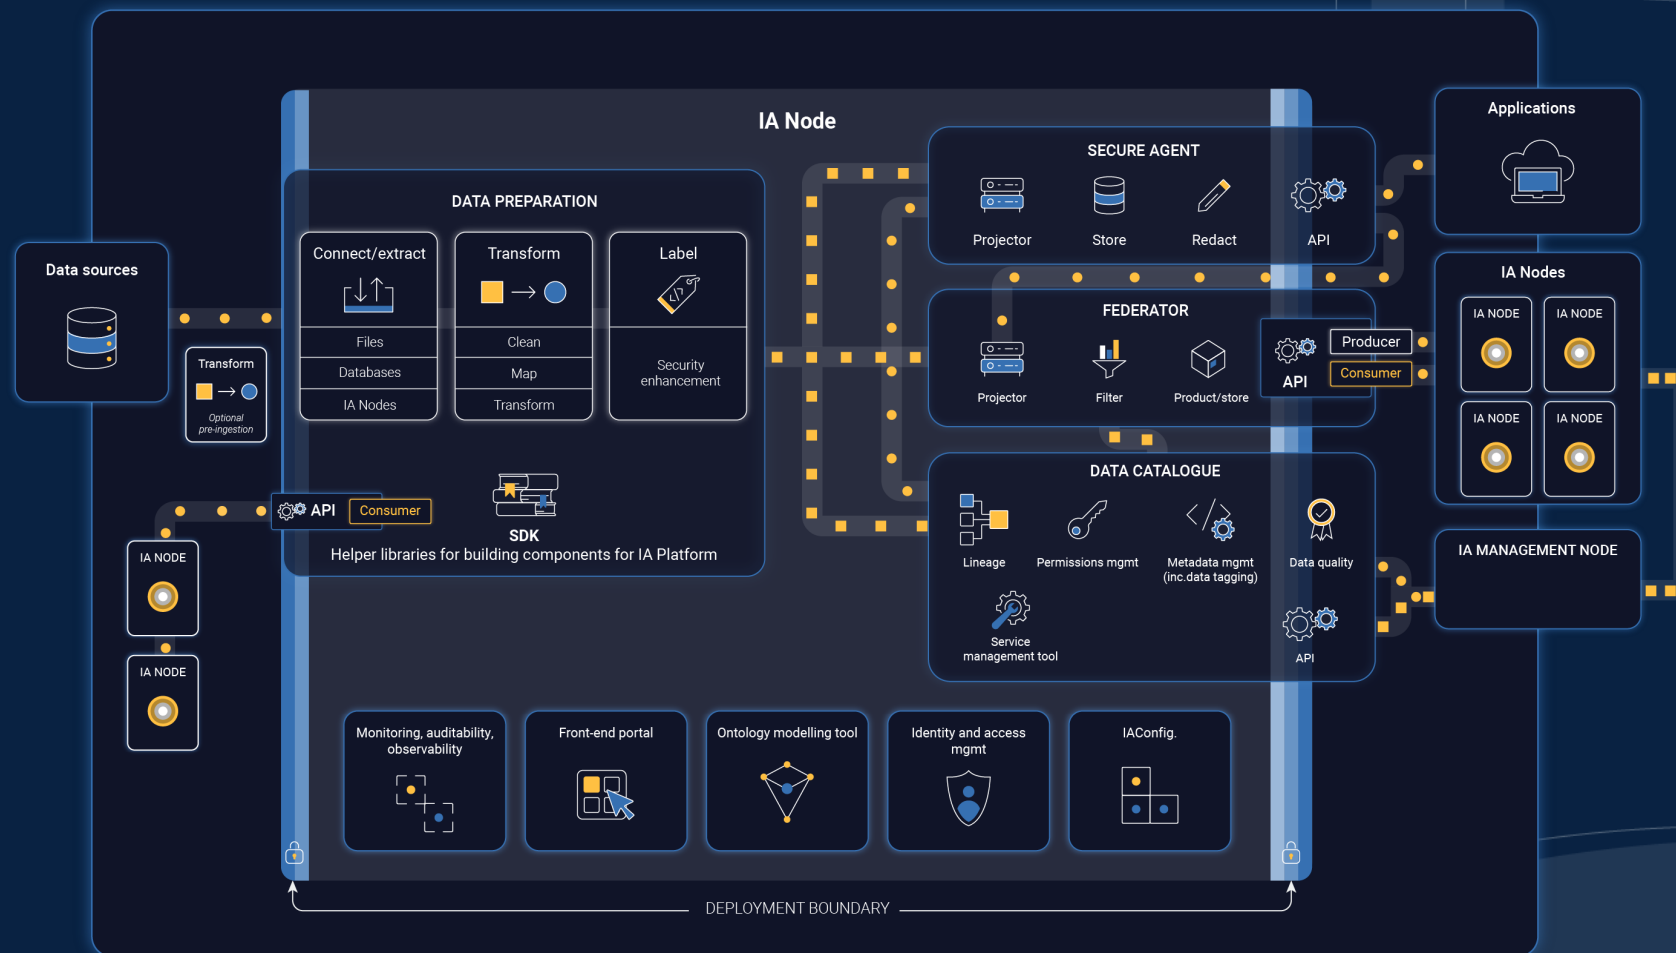

## Significant progress on...

The development of the Integration Architecture

Key features:

1. Ingest and connect
2. Transform and map
3. Secure and label
4. Catalogue and audit
5. **Expose/ share**

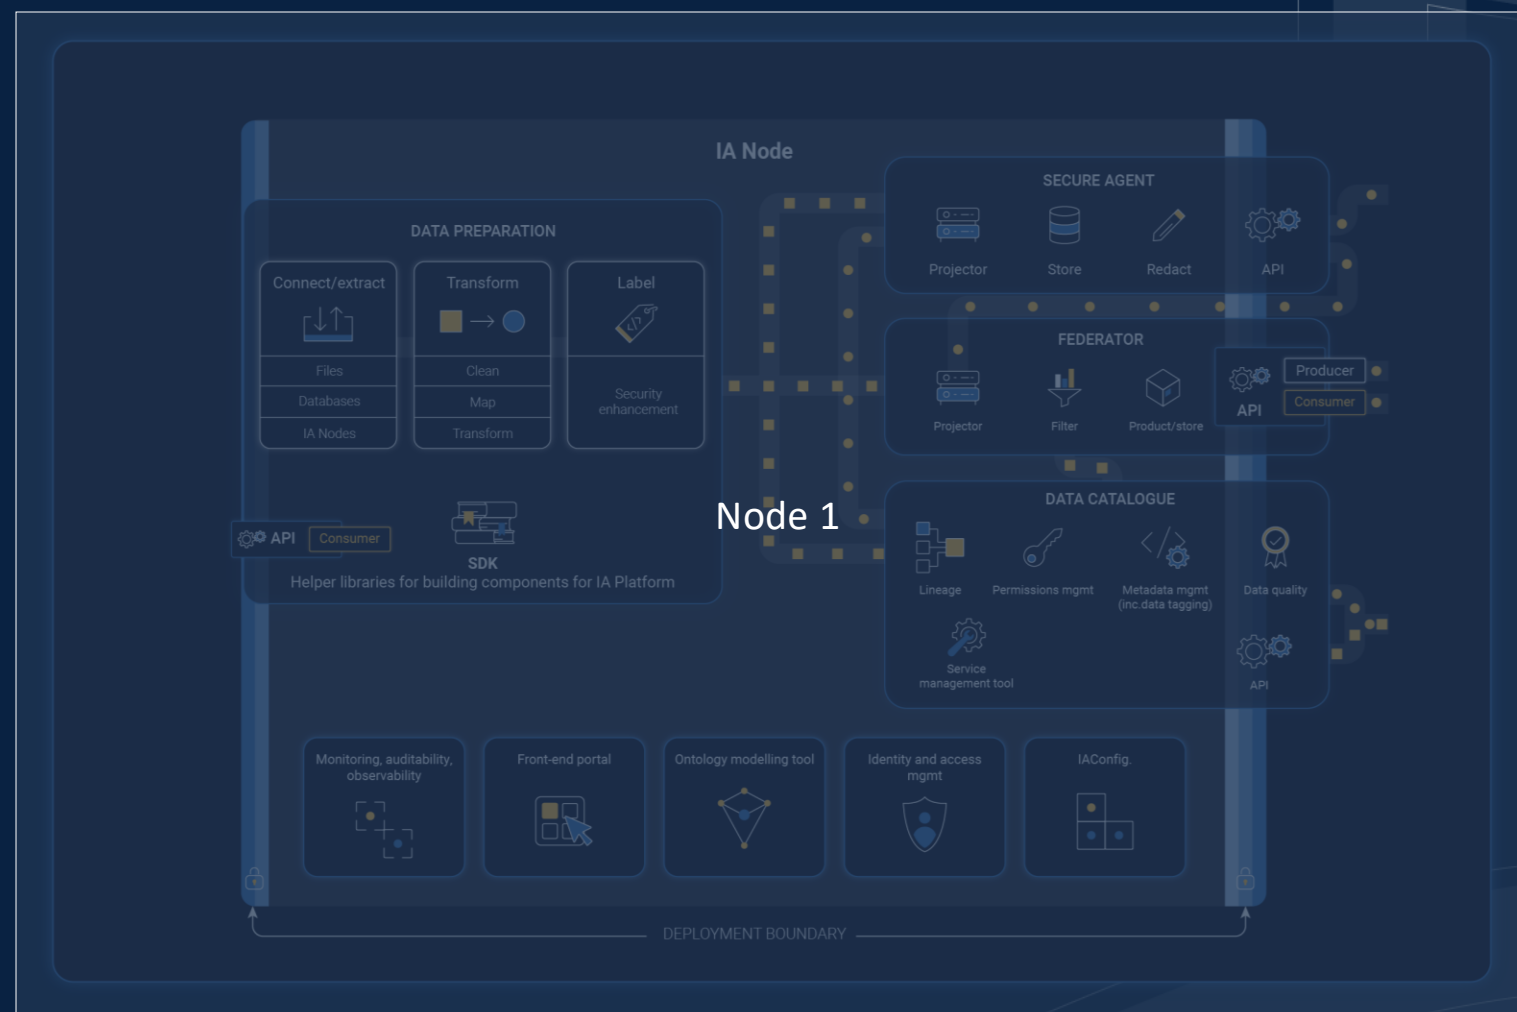

## Significant progress on...

The development of the Integration Architecture

## Significant progress on...

Connecting different IA nodes to each other

## Significant progress on...

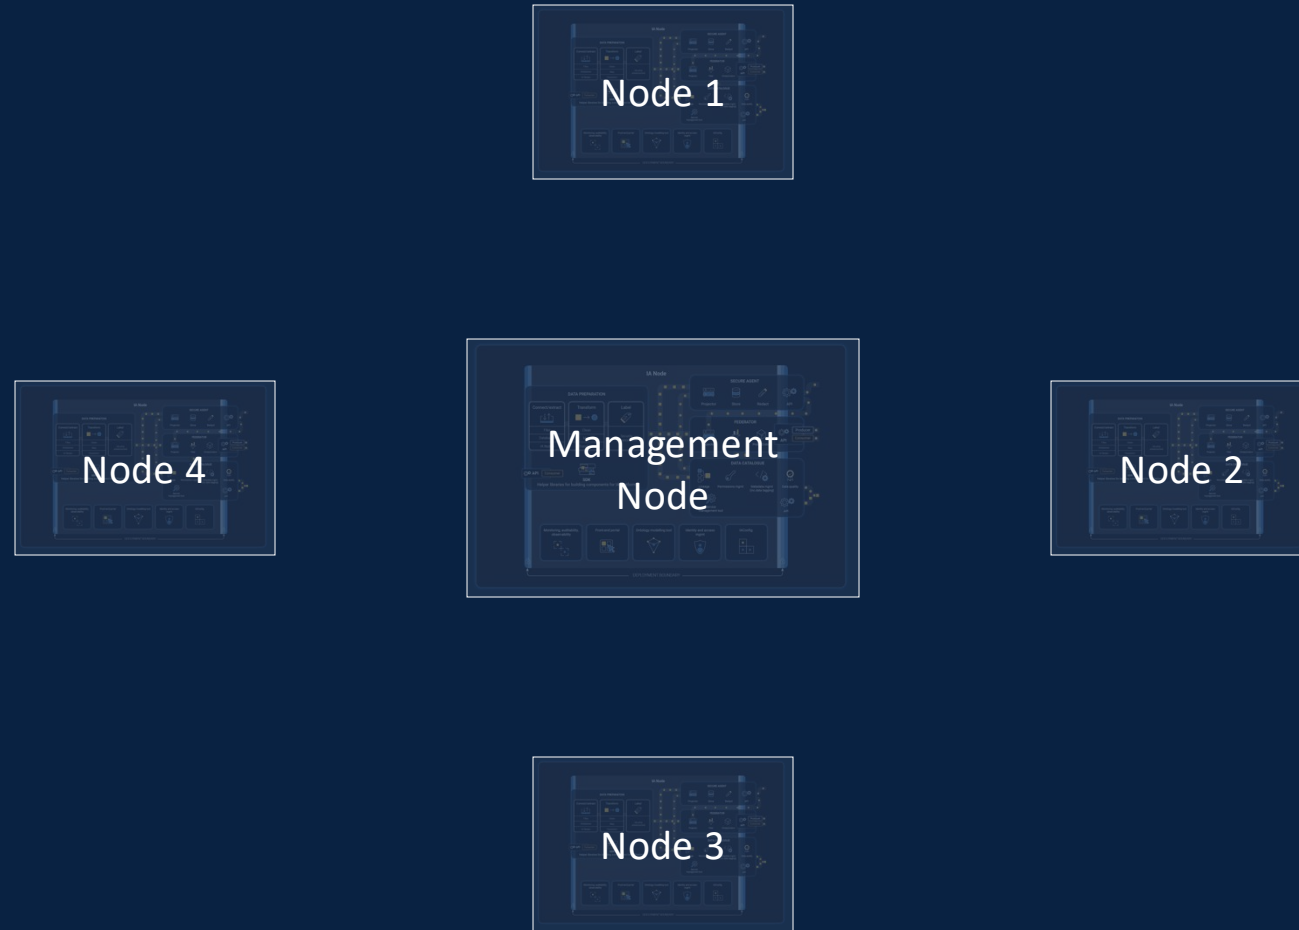

Connecting different IA nodes to each other

## Significant progress on...

Connecting different IA nodes to each other

## Significant progress on...

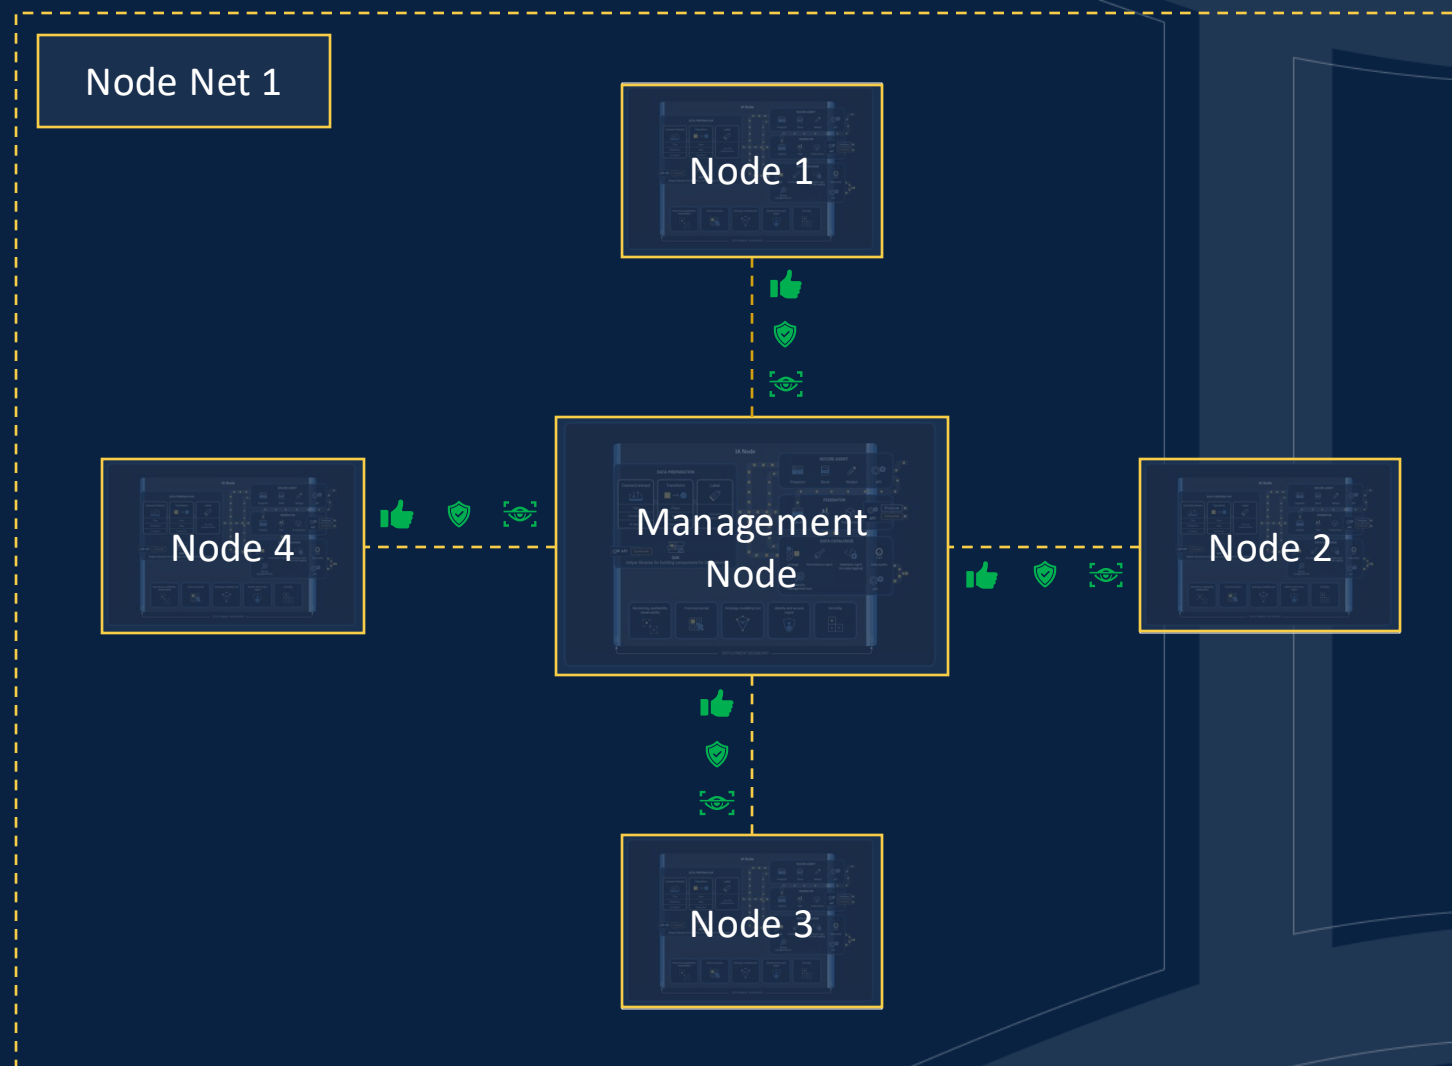

### The Management Node

#### The Management Node:

1. Facilitates onboarding of Nodes
2. Handles trust and identity
3. Establishes a Node Net

The Management Node was open sourced in **September 2025**

## Significant progress on...

The Federator

### The Federator:

1. Has multiple send/receive points for redundancy
2. Obtains configurations dynamically
3. Controls what data is shared with filters and security labels

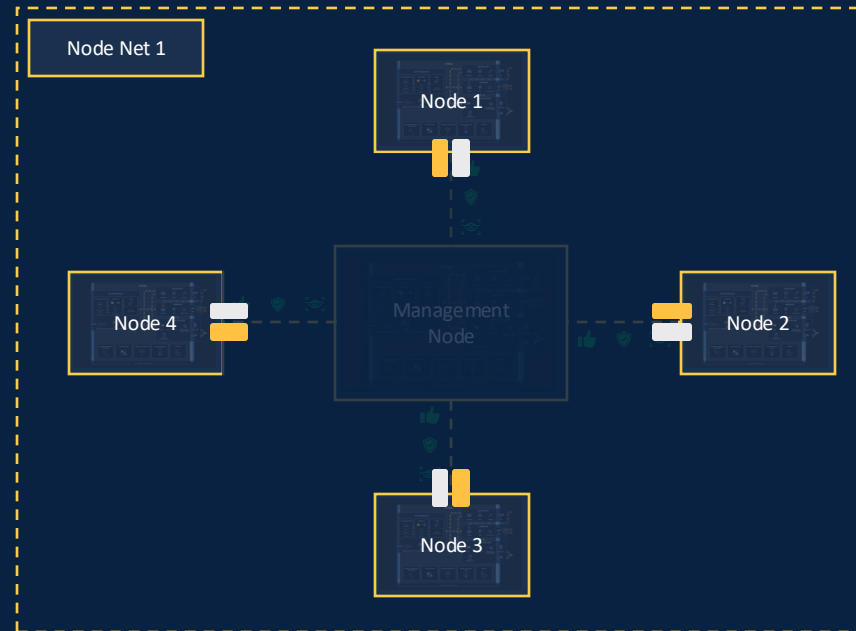

V1.0.0. of the  
Federator was open  
sourced in  
**September 2025**

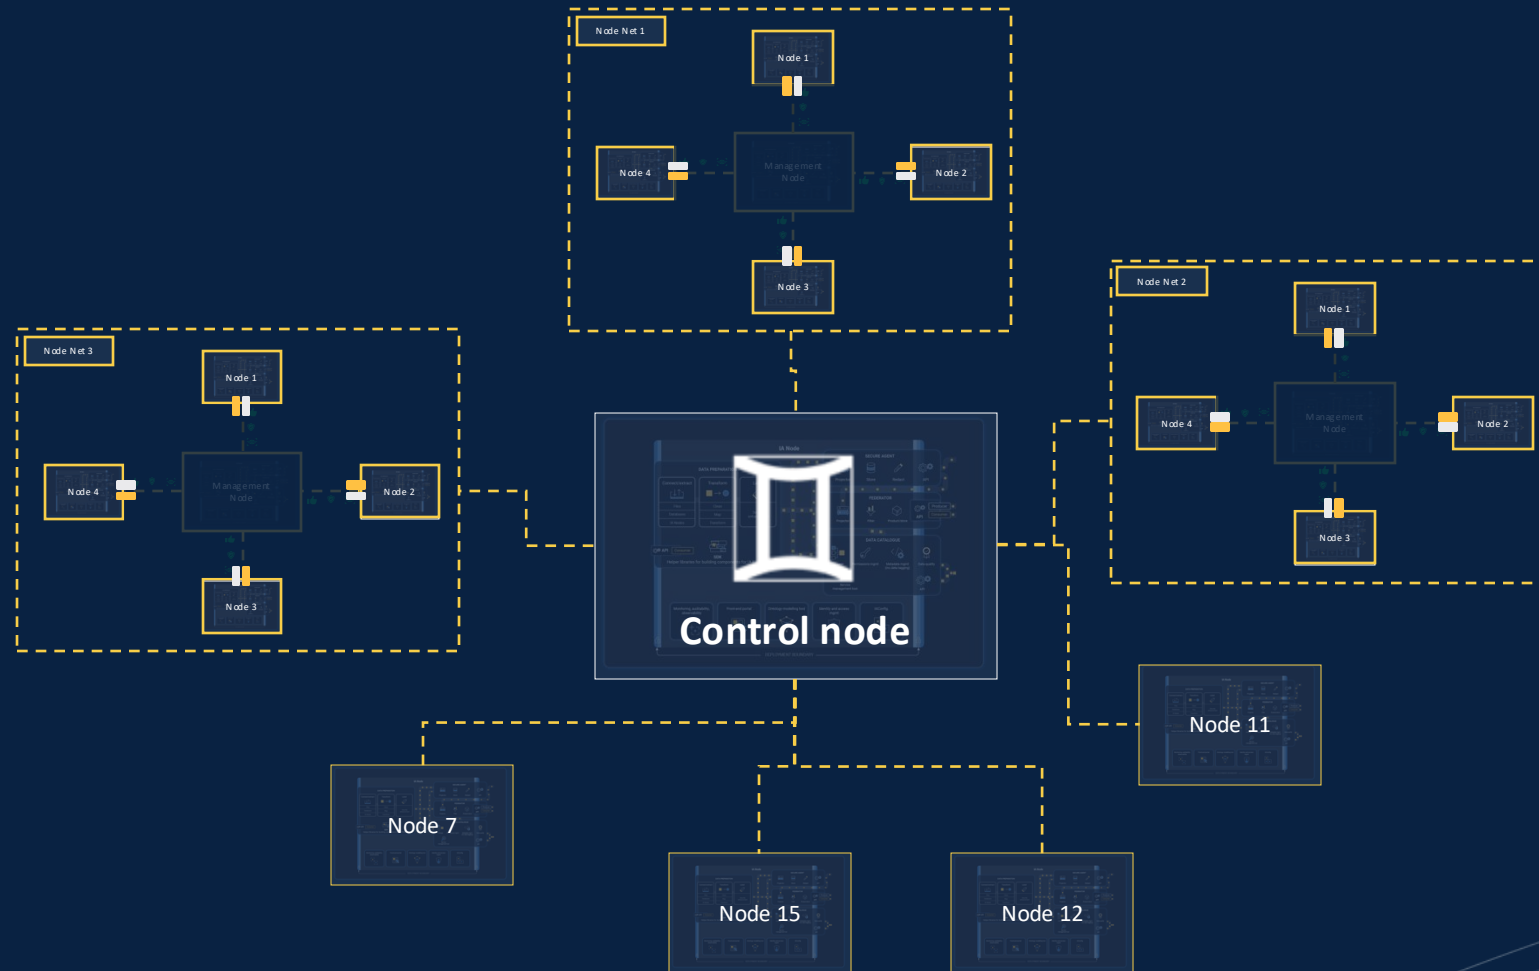

## Significant progress on...

Deploying Node Nets (N2)

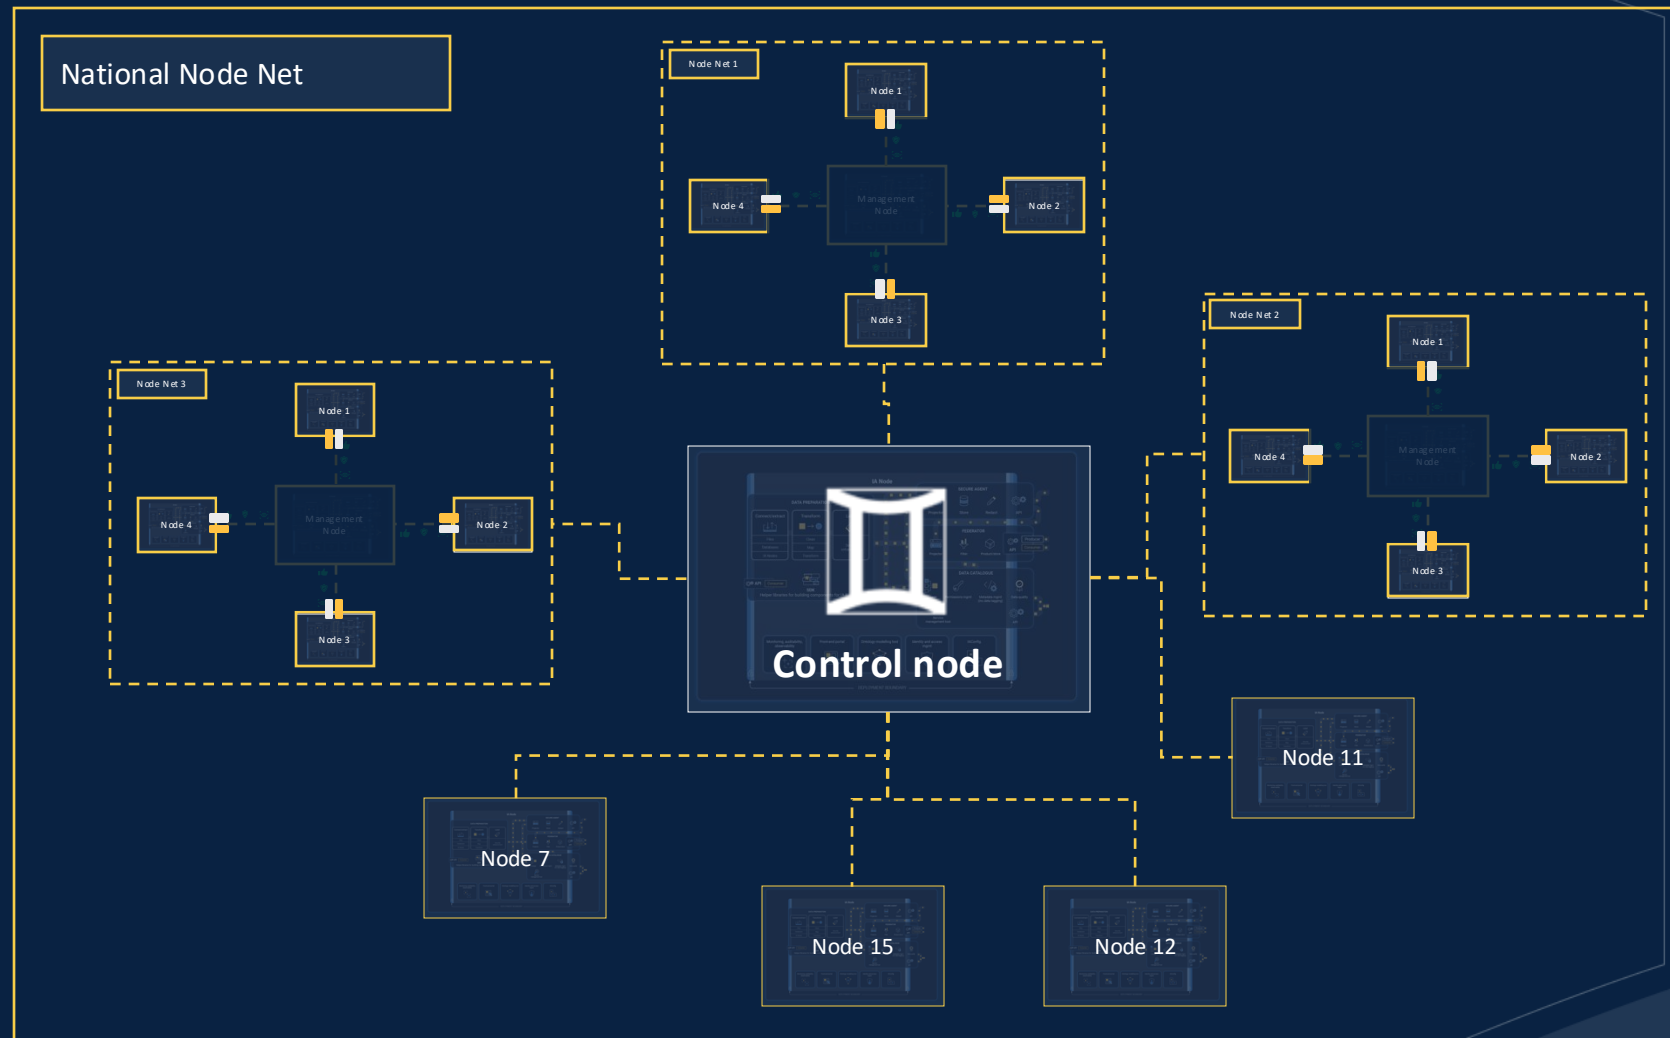

## Vision for the future

### The Control Node and National Node Net (N3)

# The National Node Net

# Exploring the roadmap to 2030

To share the NDTP’s **roadmap**, highlight immediate and future opportunities for **industry participation** and explain how to **bid effectively**.

**Demonstrator development**  
IRIS, VISTA, LISA

**Integration Architecture**  
Federator, Management Node, Data Catalogue

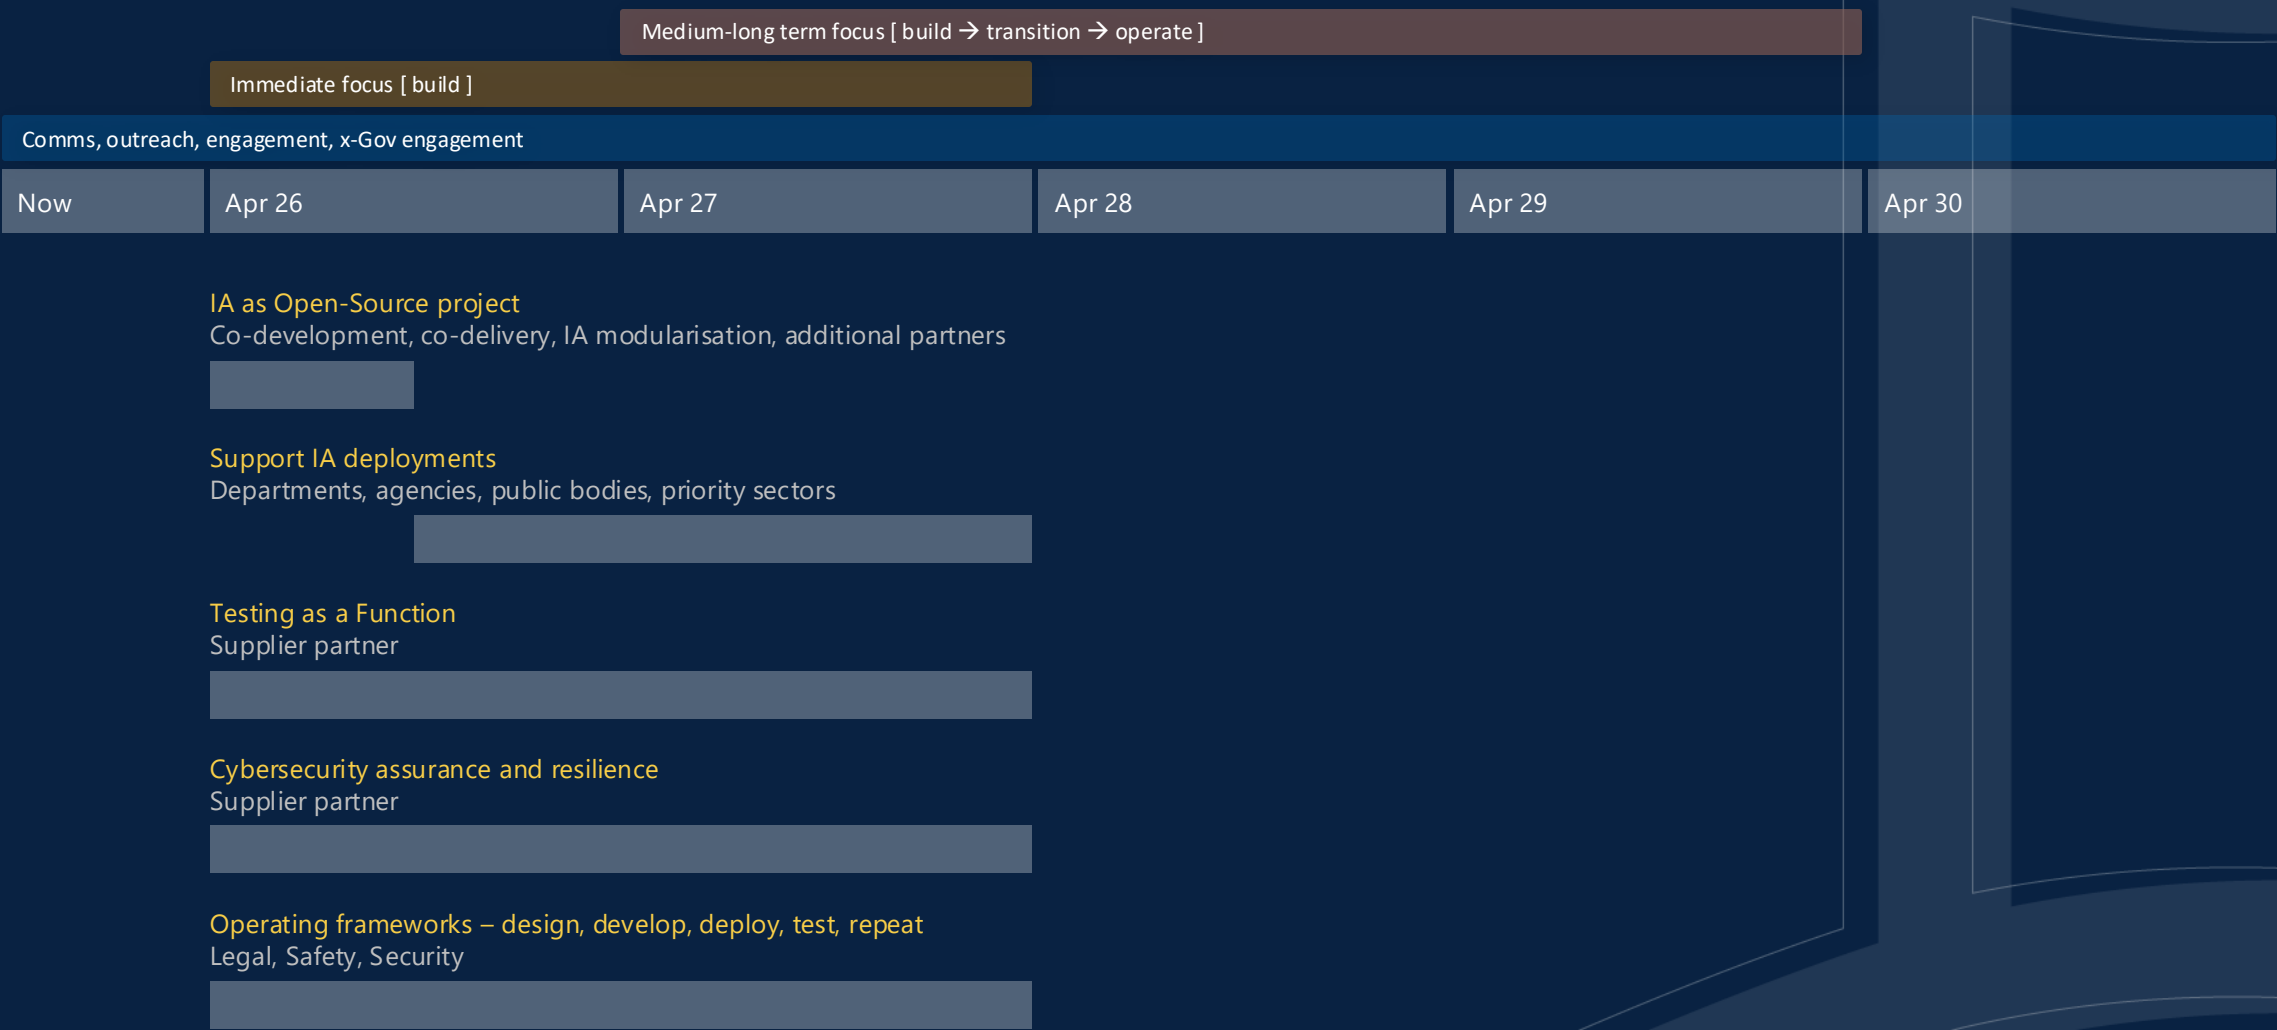

**Information Exchange Standard**  
Modularisation release, Release ies-building

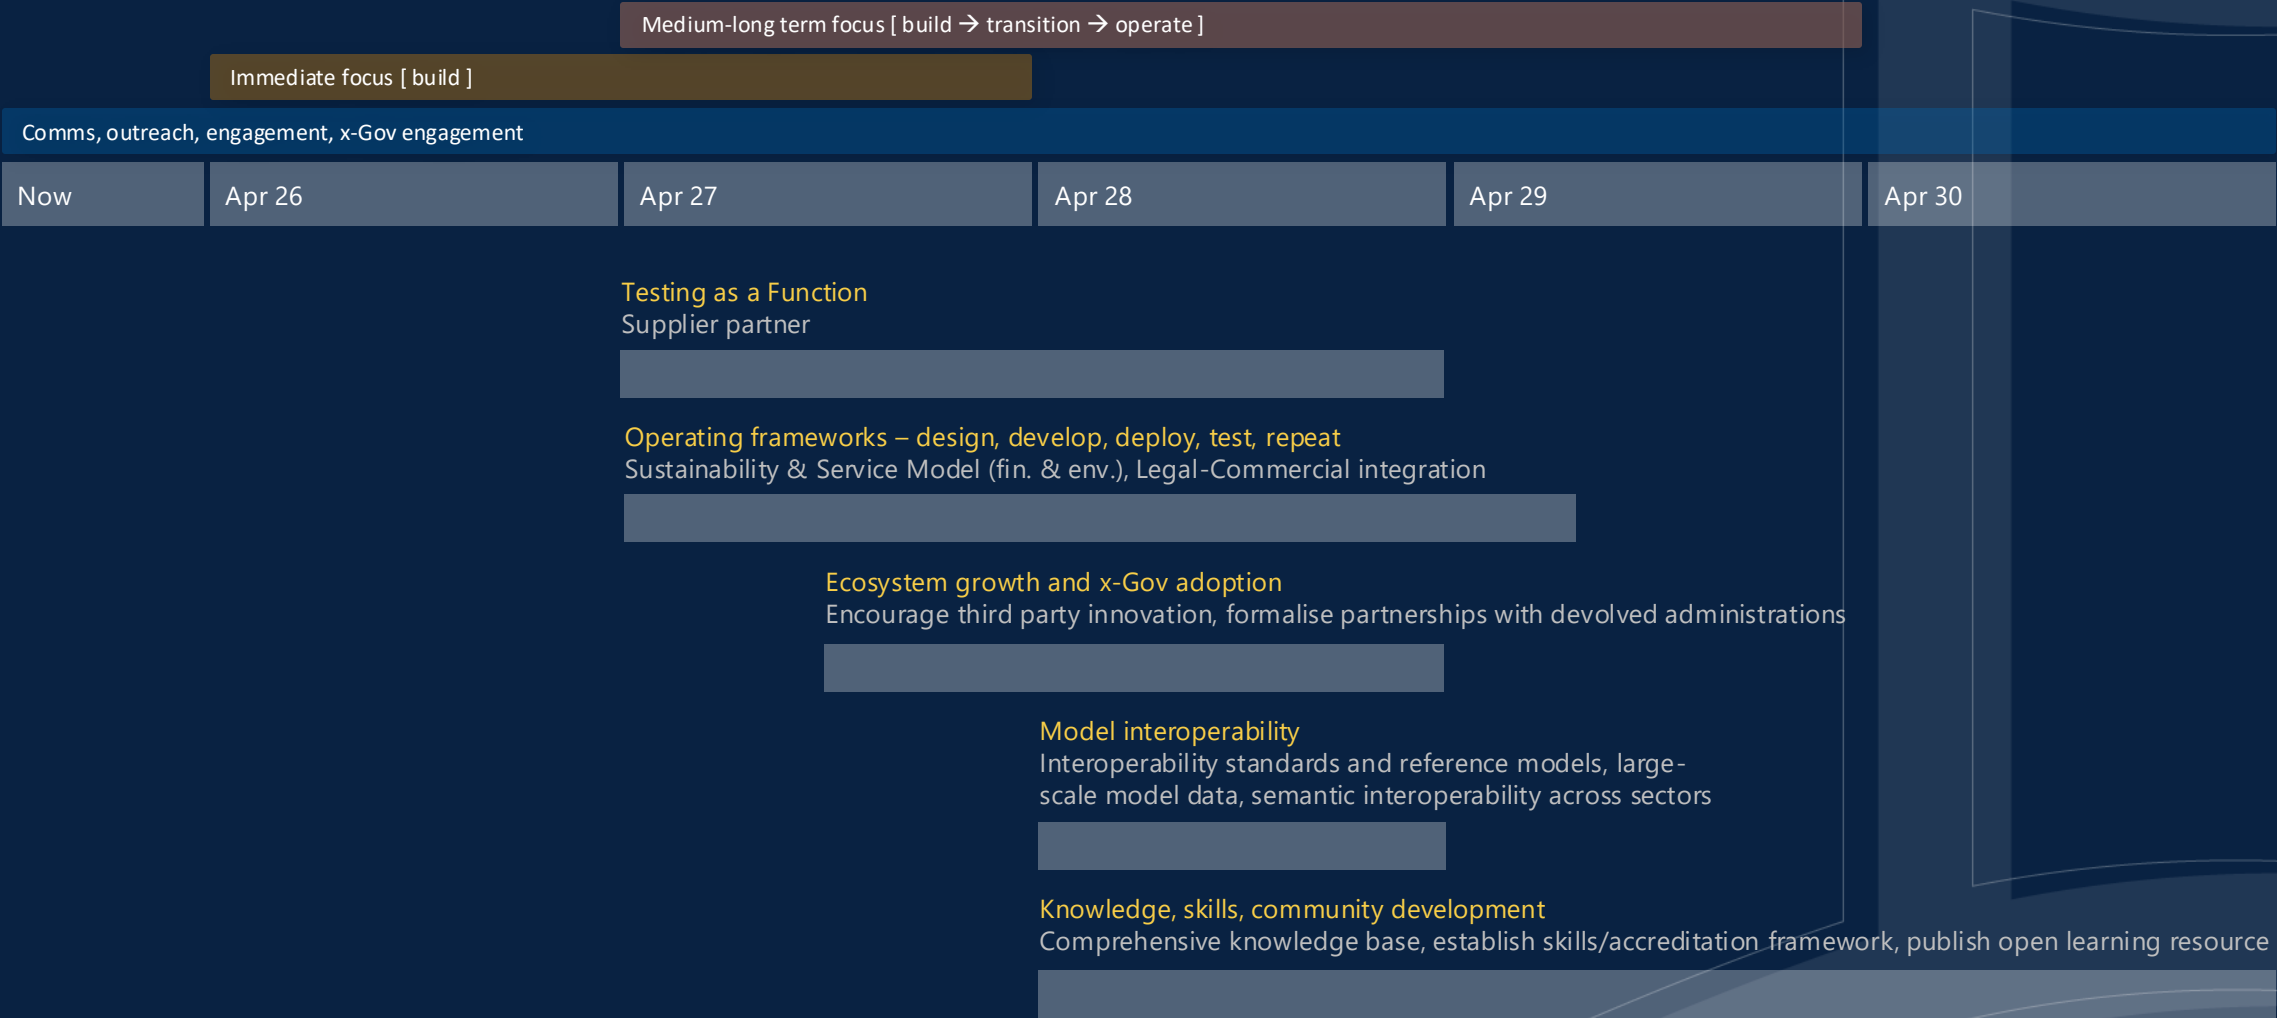

# Exploring the roadmap to 2030

To share the NDTP’s **roadmap**, highlight immediate and future opportunities for **industry participation** and explain how to **bid effectively**.

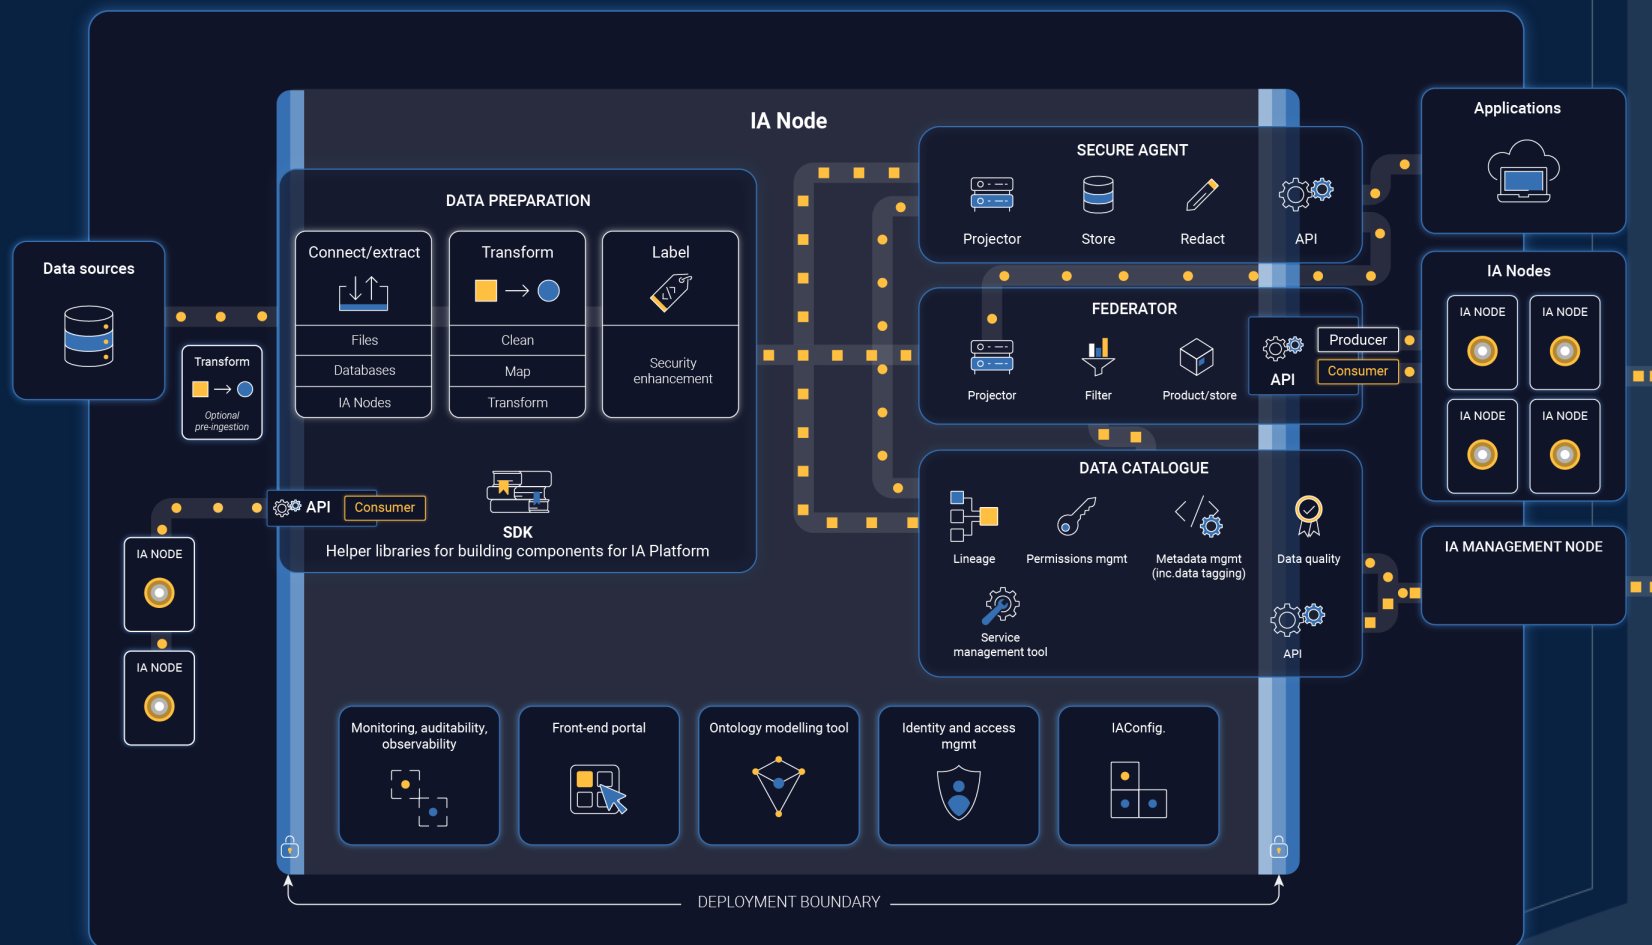

# Exploring the roadmap to 2030

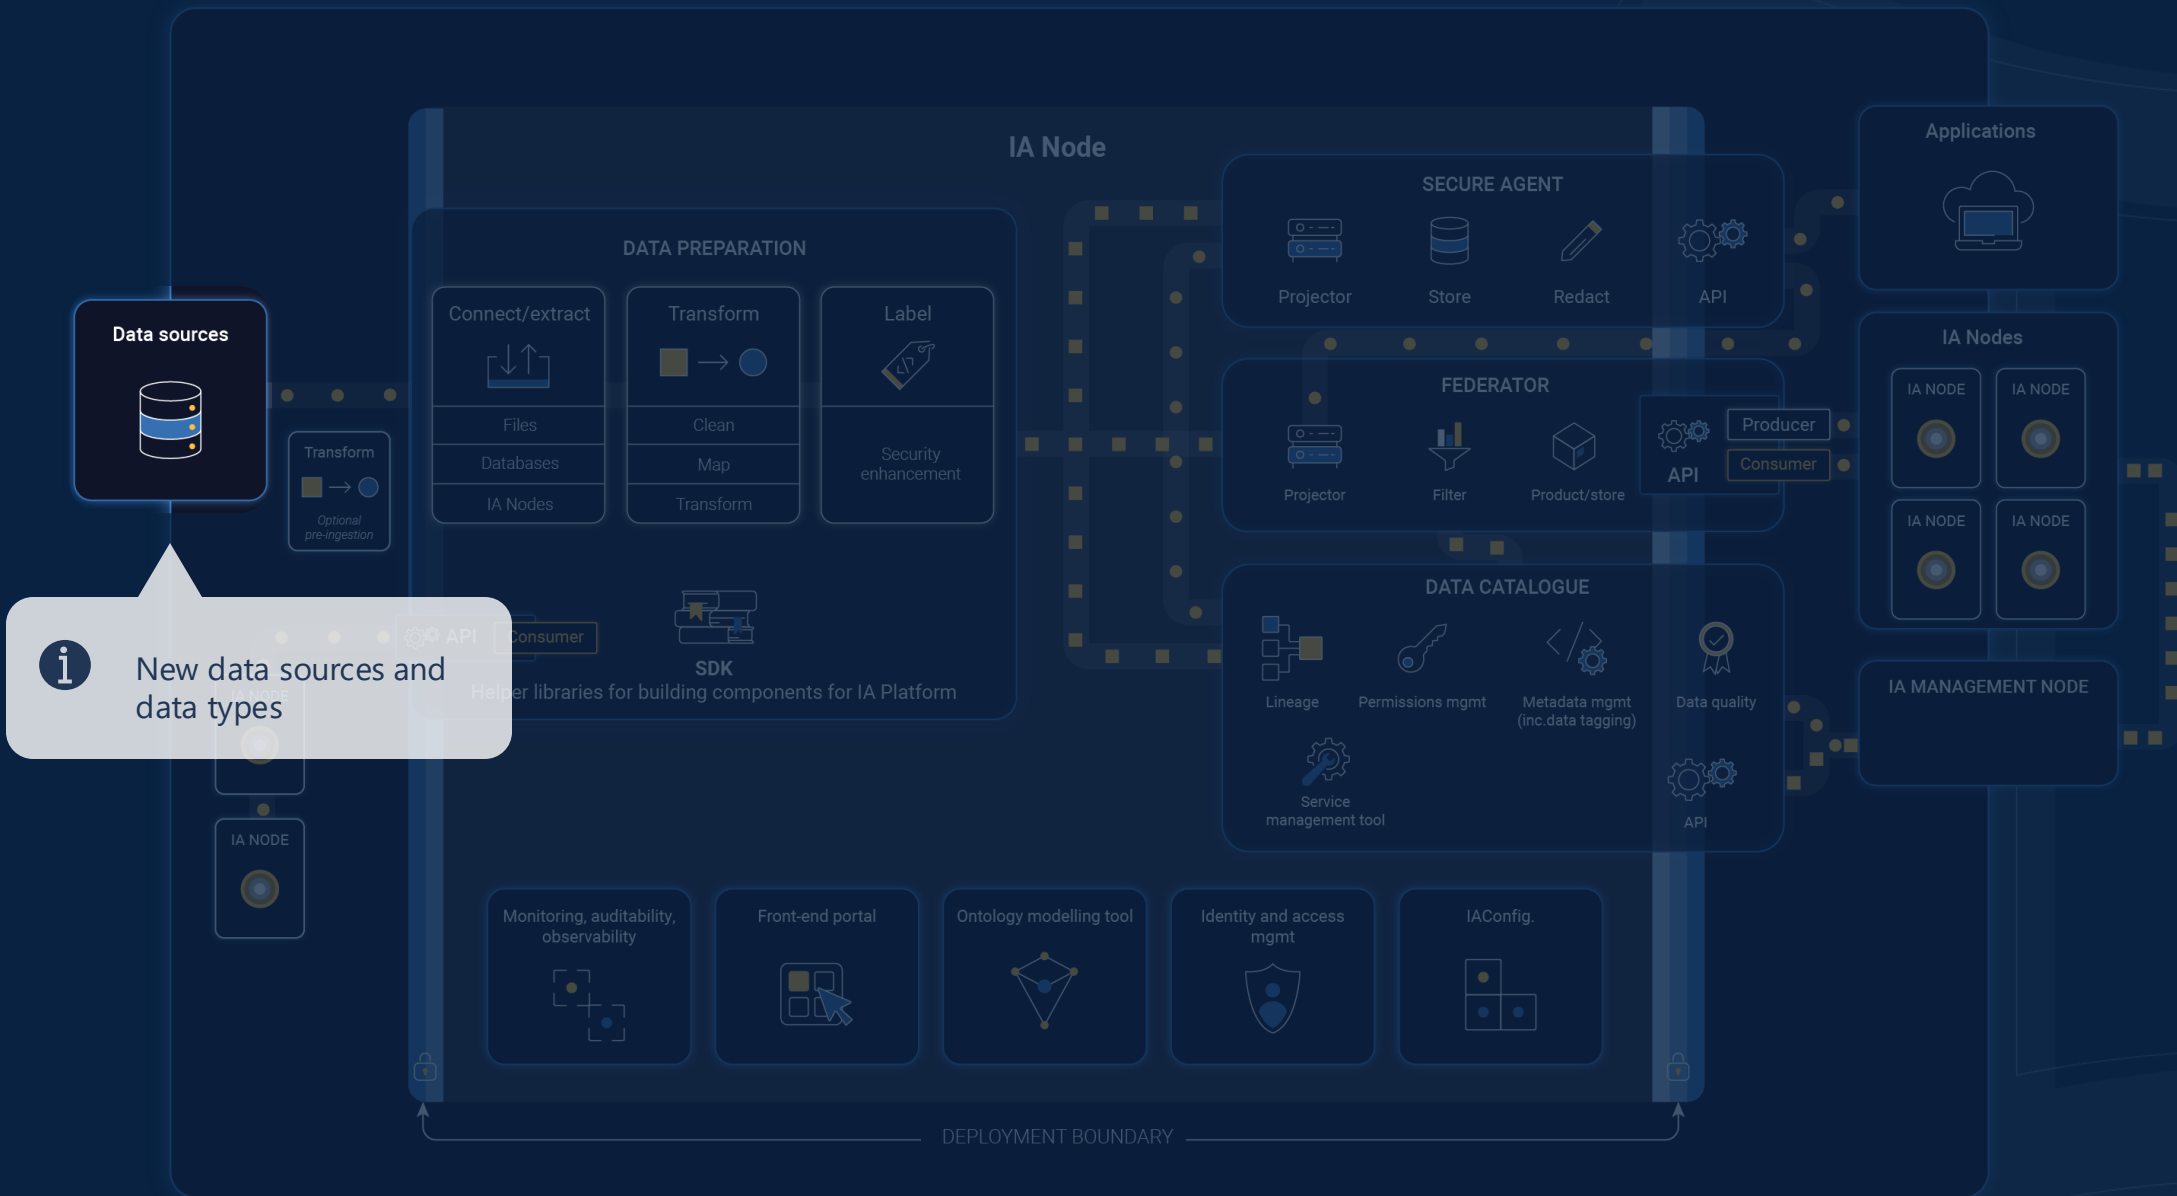

To share the NDTP's **roadmap**, highlight immediate and future opportunities for **industry participation** and explain how to **bid effectively**.

## Exploring the roadmap to 2030

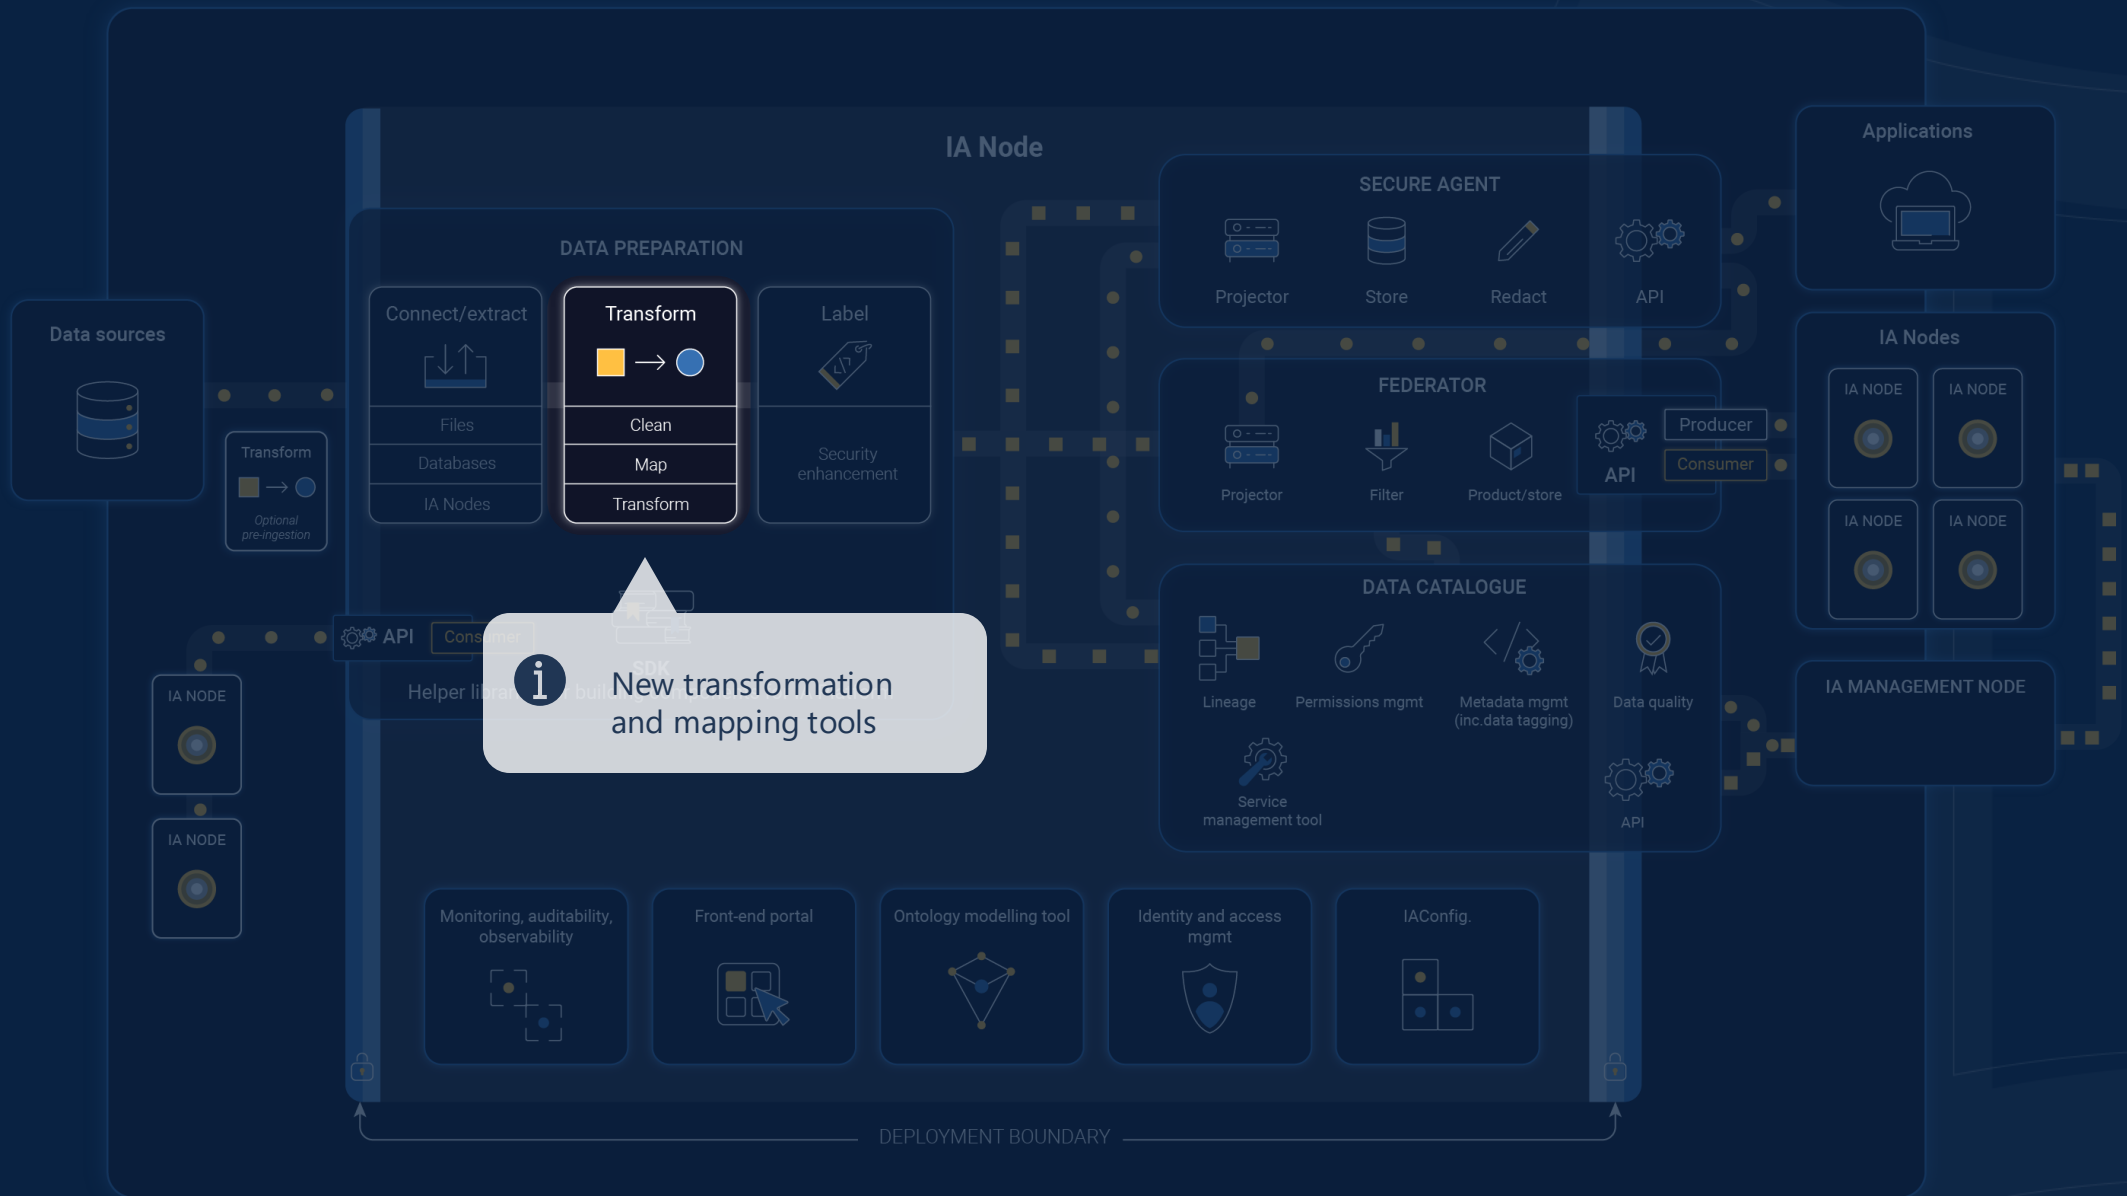

To share the NDTP's roadmap, highlight immediate and future opportunities for industry participation and explain how to bid effectively.

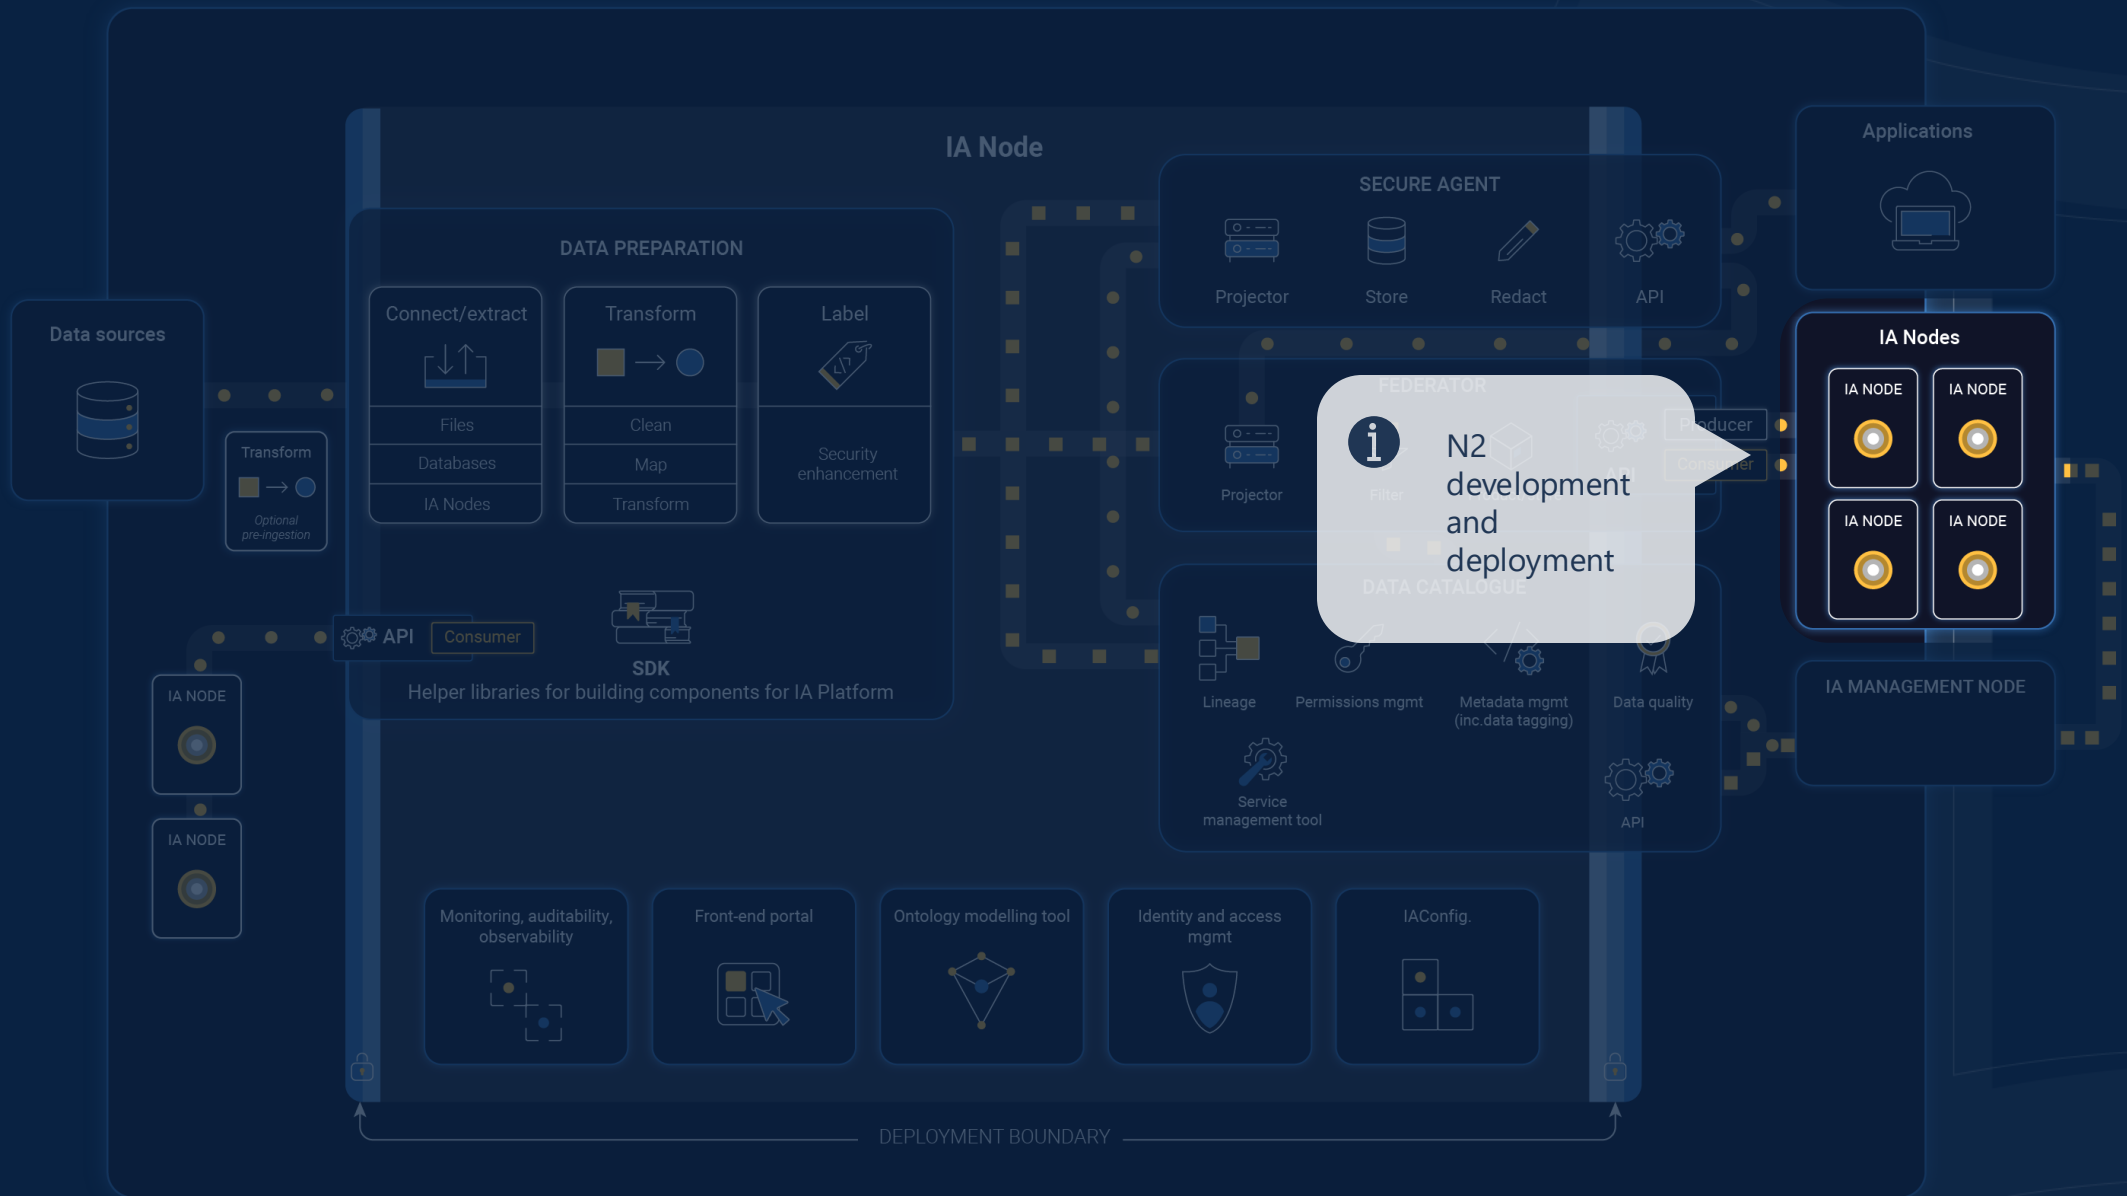

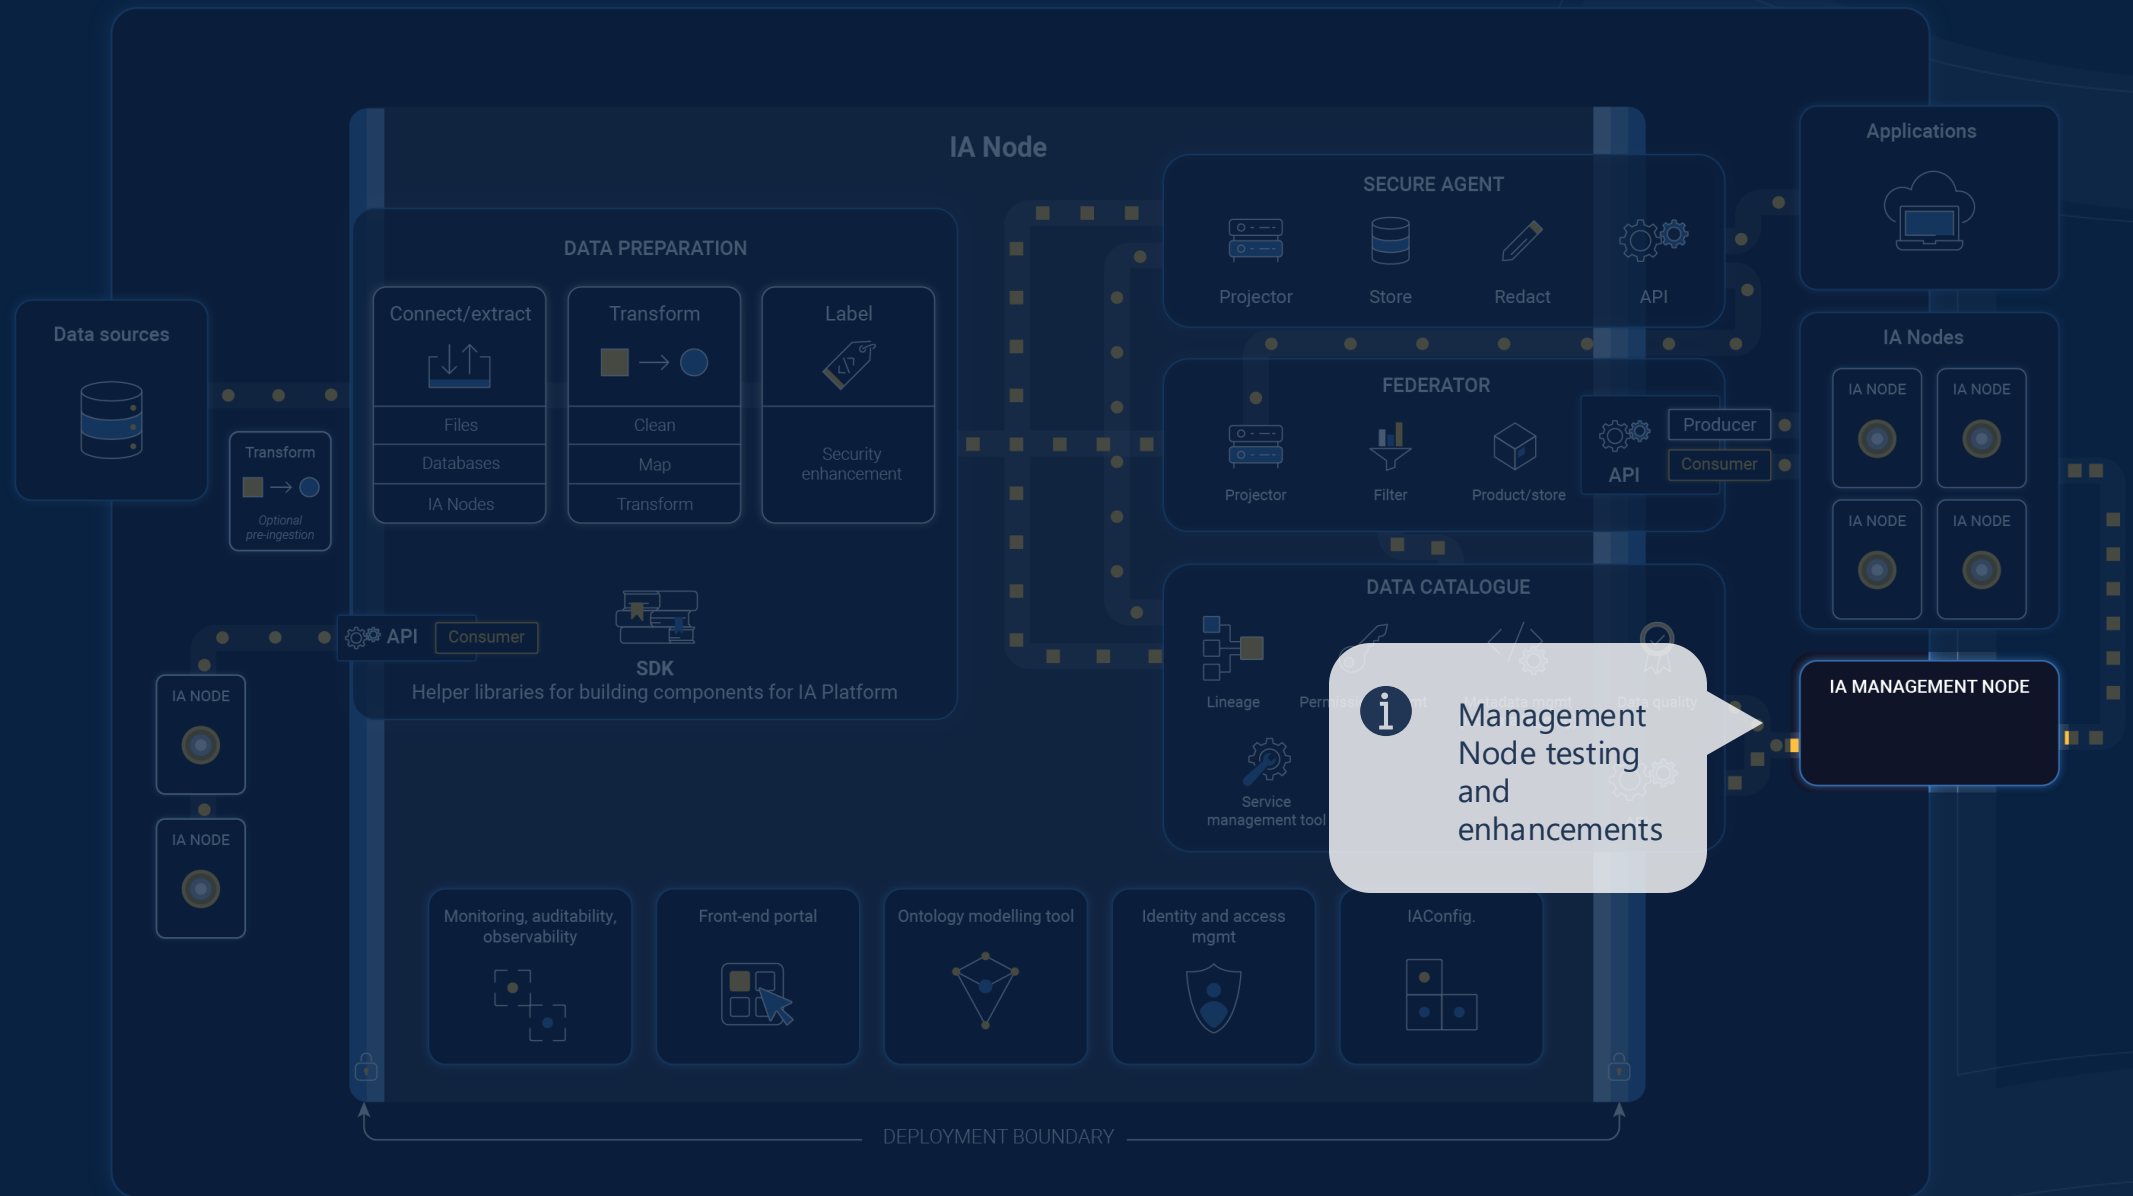

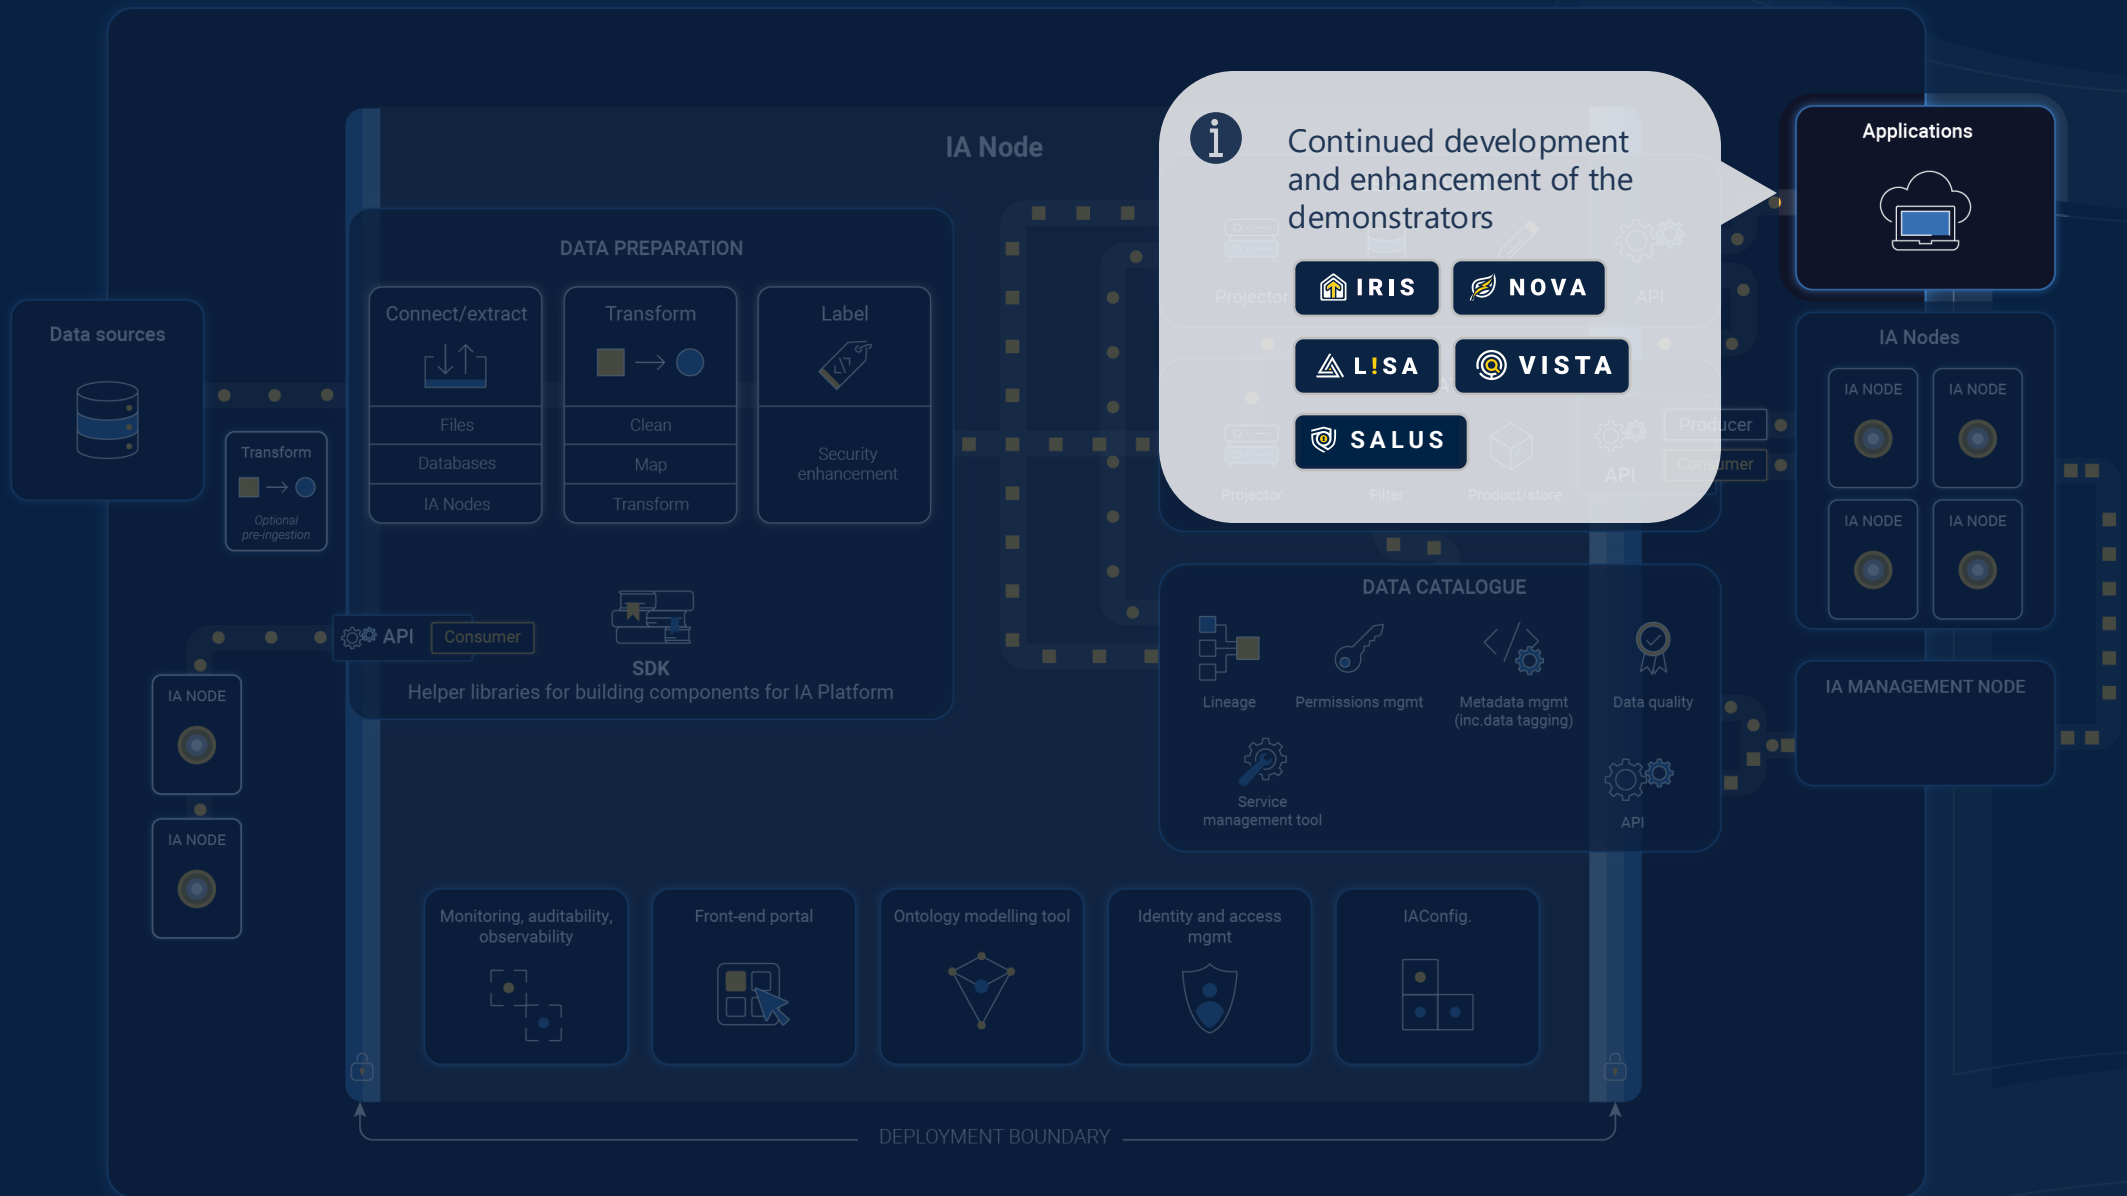

## Exploring the roadmap to 2030

To share the NDTP's **roadmap**, highlight immediate and future opportunities for **industry participation** and explain how to **bid effectively**.

### Evolving the supply ecosystem

---

- Modular tech enables multi-supplier delivery
- Opportunities for MSEs, niche specialists, and large partners
- Varied supplier base builds resilience and innovation

### Route to Market

---

- Transparent, competitive process
- In- house procurement using CCS frameworks (e.g., Spark DPS)
- Open calls for specific capabilities (e.g., testing, cyber)
- Opportunities published through official government channels

## Exploring the roadmap to 2030

To share the NDTP's **roadmap**, highlight immediate and future opportunities for **industry participation** and explain how to **bid effectively**.

### What we look for

---

- Evidence of people and skills, not just case studies (i.e., using the SFIA Framework)
- Named individuals tied to project examples
- CVs linked to real project delivery
- Working in the open (e.g., GitHub, GitLab) and transparent collaboration
- Strong technical product management capability as force multiplier

### Common pitfalls to avoid

---

- Over-reliance on AI-generated text. Always keep a human in the loop
- Generic, copy-pasted internal collateral that doesn't answer the question
- Missing mandatory evidence (watch for "must" and "should")
- Over-emphasis on past prestige rather than current capability
- Superficial responses that lack technical depth

## Exploring the roadmap to 2030

To share the NDTP's **roadmap**, highlight immediate and future opportunities for **industry participation** and explain how to **bid effectively**.

### Engage and stay informed

---

- Use our official channels first (e.g., email, website, newsletter)
- Website update regularly – check back every few months
- Newsletter by-monthly
- 30-min supplier calls – come prepared and avoid repeating web content
- We do not buy data or software directly
- Open-source contributions and genuine innovation always welcome

### In summary...

---

- Understand the NDTP context and do your research
- Show real skills, real people, real evidence
- Work in the open, be transparent and collaborative
- Use AI responsibly
